[T]he power of the press reached unprecedented levels, soon to be surpassed by the broadcasting media, with their ability to cross national boundaries with electromagnetic ease. Technology, chiefly in the form of movies and records, fuelled new mass entertainment industries which had a worldwide impact (Crystal, 2003: 10).

The controversial construction "female language" was being processed, which led to the final indisputable goal of manifesting the variant to the extent of 96 per cent, which is global, that is, the global language, that is, the language that is global was being processed after the CMC corpora selection initiation process.

Keywords: global (language), CMC, variation.

Background

A "global lingua franca spread" is being described as follows:

In my view the momentum of growth has become so great that there is nothing likely to stop its continued spread as a global lingua franca, at least in the foreseeable future (Crystal: x).

"Contact situations" and alike are being described as follows:

We have as yet no adequate typology of the remarkable range of language contact situations which have emerged as a consequence of globalization, either physically (e.g. through population movement and economic development) or virtually (e.g. through Internet communication and satellite broadcasting) (xi).

"The political and cultural reality" phenomenon is being described as follows:

Fifty years on, and World English exists as a political and cultural reality (xii).

The current status of the globally marked is being described as discussed in what follows:

Similarly, there is great variation in the reasons for choosing a particular language as a favoured foreign language: they include historical tradition, political expediency, and the desire for commercial, cultural or technological contact (5).

"[T]he new communication technologies" blendings could be described as follows:

This has always been the case, but it became a

particularly critical factor in the nineteenth and twentieth centuries, with economic developments beginning to operate on a global scale, supported by the new communication technologies telegraph, telephone, radio – and fostering the emergence of massive multinational organizations (10).

The "widespread view" occurrence is being described as follows:

That is why people so often talk, these days, of the 'global village'. There are no precedents in human history for what happens to languages, in such circumstances of rapid change. [...] [A]nd never has there been a more urgent need for a global language (12-13).

Initiation

The basic knowledge about the researched problem was obtained in the History of English course at the Department of English Language and Literature where Variants of the English Language were mentioned in the context of other content usually covered implying a large amount of content from the Great Vowels Shift, the transition from Old to Middle and Modern English and the like. By changing the curriculum, and as a part of the personal experience at the undergraduate studies at the Department of English Language and Literature, Variations of the English language were being introduced into the curriculum as a one-semester course lasting fifteen weeks as a seminar course module which practically means that the syllabus should foresee the engagement of students who should

process one variation each and present the processed in front of their colleagues other students as in a seminar session. The syllabus was based on the number of students that is literally first and last name and the title of the topic that is the variation that the student needs to process which in this specific case referred exclusively to the slides creation and the public presentation of contents. Assigned variation topic practically included data taken from Wikipedia sites, studies on English variation taken from the Internet often without modification and without other additional sources, etc. Basically, the syllabus was designed with regard to the division presented in the Cambridge Encyclopedia of the English Language concerning the problem of English language variation. Due to the age and sphere of older adolescents interest variation presentation often included a geographical division involving mostly English in Canada, New Zealand, South Africa, Wales, Australia and the like. Presentations also included dialectal variation current in England today.

Due to the obvious use of available studies, only students' performance was being evaluated with grades given based on evaluation parameters distributed in rubrics for peer evaluation process parameters distribution. The several points limit sum equivalent to European Credits (ECTS) were then combined with other predetermined evaluation parameters used for the final evaluation process. Motivation was individual and not driven by point total. Lack of time for content processing predetermined presenting content within and during class sessions did not prevent individual students from publishing studies used as their own at a later time after the course even when they were from one source, that is completely someone else's and not their own. By specifying the mentor in the Variations course, Google search presented the unexpected result combined with later some students' additional claims that they had papers published, for example, on Scribd and the like. In any case, regardless of the unwanted consequences, the educational goal was achieved because the students gained an insight that the English language is a world language and that there are different varieties of the English language. The general impression was mutual; regardless of the number of students the amount of variations for the presentations was inexhaustible and since personal engagement did not include much, it created the need to frame the multitude in a perhaps later permitted presentation of the global language which resulted in the project proposal project research at the doctoral cycle.

Discussion

The topic choice for the project defense included the most contested and controversial variant related to gender that is gender variation, which in this case, and concerning variational sociolinguistics included natural language processing known by the acronym NLP. The previously recognized non-fieldwork research attempts were known as the armchair approach. The peak of the COVID 19 epidemic enabled computer communication exclusivity, enhanced the corpus relevance which was natural, current and only achievable via the computer-mediation. The originality of the topic implies asynchronous

communication that is brought to the level with the previously planned conscious arrangement of the text based and similar to gender non-discrimination.

Figure 1: Variations in using English vs. Gender Variations (Crystal, 2000: iii in Majetic, 2023: 134)

Briefly, by looking at the, at that time, recently published conclusion of the doctoral dissertation on daily press, where the "concept of absence" was used as an indicative phenomenon according to which women practically do not read the daily press today, that is, women do not read the daily press. In the interest of the need for the participation of the females in the creation of "women's language" it was decided that the corpus is to include four registers in which, according to the previous studies reports, the participation of women was being anticipated. Due to the fact that in the following registry determinants: questions, instructions, gossip and compliments, according to the conclusion of earlier research studies, women do often ask questions, give instructions, gossip, accept compliments, give compliments, while men solve problems more concretely, the corpora content was intentionally predetermined.

The result of statistical processing using parameters as conceived by Robin Lakoff marked as a "female language" also implies a euphemised milder variant features linguistic characteristics. The originality of the research is brought into connection with the gender-regulated component, which, in this case of communication on the forum, is assumed by a filter which detects vulgar, obscene content,

implies the published deletion and even punishment of internet users from a registered IP address. However, it is a deliberate unfiltered corpus that, to be published, must meet the criteria of asynchronous communication identical to the milder detected variant called female language, which provides insight into the way people communicate, more precisely, how people communicated at the time when the corpus was being collected. Communication is understanding, and then this act is called communication; that is, the goal is for the recipient of the message to understand the message to satisfy the goal of transmitting the message as quickly as possible.

In the, mentioned corpus research, the basic principles of the theory of speech acts were used, which are reduced to micro and macro acts, where the macro act is the understanding of the transmitted message with the goal in this case being the economy of writing, that is, in this case, the average population uses this way of communication, i.e. mostly older adolescents have the goal of communicating as briefly as possible, and the number of micro acts is assumed and proven to be reduced to a minimum which gives an image of the language that has been verified as the same and leads to the macro act, which is understanding, and only then is communication being achieved. Noise, noises is the influence on micro actions and the hindrance of understanding for the co-creation of macro actions, to be reduced to a minimum, the content is often literally the same and created by insight into the other most common media contents which can be consistent with the globalist universal.

In the search for written sources on variations, a previously unknown source discovered under the title "Roman Variation" expresses "media variation" influence onto a global language and may also be conditioned by the fact of a common ancestral language which is a Proto-Indo-European blend with Latin, and not as the Linguistics founded in 1952 or 1953 claims Sanskrit exclusively. Insight into the contents of the book was not obtained immediately because the book was not purchased but later was downloaded, the inscription is however reduced to the content of the summary on the back cover which may be based on the conflict and connection of Rome conflict recognised as the autonomy of the Anglican Church or alike. In short, the always controversial connection between gender and society has been confirmed to have a much broader origin than any other variant variation.

Seemingly outdated, communication of this type is an imperative when faced with noise in the channel one cannot say planned, and the noise in this case is the humanoid

objects insertion interfered and affecting the communication competence and performance, not to mention other types of cyber violations imposes the NLP solution to communicate asynchronously less susceptible to public and professional language decay preferred alternative. Below is a series of confirmed proof samples in the corpus classified as evidence A B C D E and a set of a supplement studies guided by the assumption of Ferdinand de Saussure who claims that language is a structure not submissive to changes in society which can be explained by the grammatical simplicity of the English language as described by people who learn English as a foreign language and the comment given by Crystal which is as follows:

In its *easiness of grammatical construction*¹, in its paucity of inflection, in its *almost total disregard of the distinctions of gender*² excepting those of nature, in the simplicity and precision of its terminations and auxiliary verbs, not less than in the majesty, vigour and copiousness of its expression, our mother-tongue seems well adapted by organization to become the language of the world³ (7).

Grammatical specifications related to gender are pronouns that have been and are constantly being processed, all the research processes leading to countless attempts time and time again the same, which means that research on gender in this respect does not give anything new, unexplored, original, it no longer has a scientific contribution or any contribution and is reduced to rewriting and repeating what has already been done, which cannot be considered at the level of doctoral dissertations. However, as it is too often quoted with repetition "changes in language have happened after all", are happening, which in this case includes the social component that is change of language in society and time.

The social shift concerning the researched group includes the rather bizarre fact that the parameters used in the research were modeled on the lawyer's tactics manual which considered the women in the court to be a special case and primarily concerned the semantic component of the average population of women who could not even understand the indictment what the law required and is a prerequisite for the next legal measure. In essence, knowledge of the language was considered a privilege and a class status without insight into the situation on the ground. In the corpus research, Robin Lakoff's parameters based on describing the characteristics of the so-called "female language" were used as one of the many parameters. It is a euphemised "milder" variant whose

¹ Emphasis S. M.

² Emphasis S. M.

³ Emphasis S. M.

characteristics are evidently alarmingly represented on a platform accessible to all.

Prior thinking about the moderator and filter preconditioning the written creations of thoughtfully rethought published formations makes the exploration of instructions what feminine language is about. Consequently the publication of instructions that are entirely feminine language formations leads to the emergence of writings that correspond to linguistic writings as described by Lakoff here and on a global scale.

Originality of research on instructions, as one of the registers, is confirmed when a female language is reflected in the globally available content. So today it can be freely said that an individual in society uses the internet when one needs instructions for something which makes the gender variant the so-called female language equated with the phrase global language. Global variant created obviously by insight into other published contents, the ways one expresses something to quickly and most reasonably explain the procedure where perhaps the pidgin variant due to understanding cultural acceptability arrangements has been transformed into a ubiquitous everywhere the same global variant that is not just a female language but a universally acceptable, unique, global, uniform, most efficient messenger, explainable easily via the theory of speech acts, controversially positions linguistic anthropology where the need to research the unexplored by the field work detects not a variation but global sameness and integration created according to the other models of what others publish! The originality of the research is the parallel: "female language" equals global language! Therefore, N.B. read and compare the corpus text from segment A to E and supplementary segments XII studies published after the last promotion:

Conclusion

If a variant x matches variant y in the proportion of 96%, then the variant is universal! N.B. Read and compare the corpus text from segment A to E and a supplementary segment XII! If/when the content is published on the global network, then it is global, and the variant is universally global! N.B. lying, manipulation and plagiarism require registration publication on a globally visible platform!
