Hence we will grasp the fitting value for GDP & y-y value so as to boost our economic development situation with evidence to show the rapidness and slowness degree by government institution which may make a blue-diagram for next year even middle plan after several years. Whereas, we will plan our investment and health a certain for the sake of enjoying the high-level-quality modern life earlier. On the other side, the high-technology product like rechargeable battery used in the EV (electric vehicle) and robot will be prevalent currently and in the future which may prevalent currently and in the future for it to drive longer like 200 kilometers per charge, so its usefulness will be more searchable and searching item for us to process later. New one like the solid-state battery as a new innovation will be used in EV in future widely, which may become a highlight for our scientists to process continuously. At the same time, the scientist needs to publish their achievement continually to journal with high impact factor for the readers to know the situation and feasibility. The author like scientist in college would complete the investigation content and form the formal achievement in the sake of communicating with readers with using English skills well. Thereby the correct and clarified information might transfer into the readers acknowledgement who has an interest to know the meaning from papers. Therein the published one will overview from the author readers through editor help. We should pay more attention to the innovative aspects which may take up some new idea and paths. As for scientist he needs to continuously search for the new project for the sake of further searching for the deeper and wider field all the time.</i></p> <p>Keywords: research, economic GDP (gross domestic product), scientists, continually, behavior & judgment, journal introduction, publish papers, industrial product.</p>

1. Introduction

The GDP (gross domestic product) which indicates national economic status has played an important role in every aspect in the world. So that the population growth rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality productivity. Hence, we should consider the effective factors, for example the population quantity, new quality productivity with high technique etc. Like big plane electric vehicle battery AI robot quantum computer pharmaceutical manufacturing disease diagnosis AI (artificial intelligence) ocean source

space exploration etc. other ones. Low population is able to offer high life &quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So, the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population growth rate mutually and cooperatively. Hence the two aspects may be emphasized

and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more precisely and correctly according to the recent years experience and variation.

Therefore, the high-technique products will be completed through wielding our scientist and senior Engineers coordination tightly for the sake of reviving the industrial and tertiary modernization. We should constantly look for and seek the new quality productivity sustainably so as to take place of our traditional industry becoming modernity. An innovation industry like new energy electric generator will be in front of our path forwards, so that the corresponding tactic must be put up and seek the opportunity and fortune in order to burden our responsibility quickly and not to forget recommend the fitting one to appoint new occupation. Like the Bole identified horse or Maosui self-recommended the recommendation will be represent one aspect for our human resource department to consider and evaluate the recommended included a full research room with a set of computer high-technique instrument &device, subordinate, subsidiary staff, salary, house, welfare etc. a series of work so as to appoint his new occupation reasonably and willingly. [1~15]

2. Discussions

The industrial products may similarly exciting our scientist and engineers confidence for the sake of enhancing our high-technology product constantly with an innovation view. As knew it can take up new industrial innovative result for us to pursuit and grasp knowledge and experience armed by new technology spirituality which may last long time until next generation innovation exhibition completely and clearly. We can image the world one hundred years later we know some scenarios from the novel story and movies. There will be many ship-crafts that is to be created with advance technology and they fly from one place to another for the sake of completing save human mission. Maybe our outer space and other planets will be conquered somewhat so as to save earth resource and safe they have to transit into near planet for the reserving another route once the earth risk occurring we must get away the earth, or we will die in earth. No matter what will be we primarily seek to enhance

our industrial product for promoting our GDP value, that is best way to want doing firstly.

2.1 Stocks change

The recommended ones included in this morning <Nandu Estate> completed T+0(sell after buy zero day) and increased big with 9%; <Yueling Holds> realized T+1 with increasing big 20%; <NJ Travel> realized T+2 and increased largely with 10%. [1] At the same time, the stocks with <BJ Kerui> with 002350, <Guoji Jinggong> with 002046, <Hahan Huatong> 301137 with under-controlled nuclear aggregation. [3] on the other hand, on Dec. 11, 2025 the precisely choosing ones included in <Yongguan Xincai> with 603681, <Changfei Fiber> with 601869, <Bubu Gao> with 002251, <Nan kang Group> with 001360. [4] Moreover, the plates increasing amount showed 2%~1.1% from big to small while the Main force net quantity expressed 0.05~0.6 by <Non-ferrous metal>~<Under-controlled aggregation> accordingly to show their diversities that main force net quantity played a certain role.

Table 1 The plates increasing amount. [5]

Plates name	Increasing amount, %	Main force net quantity
Non-ferrous metal	2	0.05
Wind turbine equipment	1.5	2.4
Flexible DC transmission	1.4	1.2
Super-conduction concept	1.25	1.1
Electric grid equipment	1.2	1.6
Under-controlled aggregation	1.1	0.63

2.2 Introduction to the Let's be coffee beverage

Its ingredients include in water, sugar, skimmed milk powder, whey powder, salt, instant coffee, full fat milk powder, sodium bicarbonate, sucrose fatty acid ester, salt, acesulfame potassium, sucralose, food flavour. Therein, caffeine $\geq 200\text{mg/kg}$. The expired date will be 18months.

Table 1 The let's be Lotte mild coffee beverage's nutrition ingredient [6]

Ingredient	Content Per 100ml	NRV(nutrient reference value), %
Energy	133KJ	2
Protein	0.8g	1
Fat	0	0
Carbohydrate	7g	2
Natrium	45mg	2

2.3 Subject for the International Journal of Development Research

It has an Impact Factor with 8.058, Qualis Indexed (Brazil), CrossRef DOI Assigned, monthly publication peer-reviewed open access high visibility. The *International Journal of Development Research (IJDR)* invites high-quality manuscripts for publication in the **December 2025 Issue (Vol. 15, Issue 12)**. Meantime, the IJDR publishes articles in all major academic disciplines including the below. Sciences (Biological, Physical, Chemical); Engineering & Technology; Agricultural Sciences & Biotechnology; Medical & Health Sciences; Management, Commerce & Economics; Arts, Humanities & Social Sciences; Education, Law, Environmental Studies; Interdisciplinary & Multidisciplinary Research. The IJDR welcomes submissions in the following categories following. **Original research articles, Review articles, short communications, Survey papers, Case studies, Extended conference papers, thesis/dissertation-based articles, Academic or Scholarly Papers.** All submissions undergo **double-blind peer review** and successful articles are assigned **CrossRef DOI**. [6] So that we heartily invite the author like scholars to submit their valuable papers to us quickly, we must deal with them rapidly as soon as possible.

2.4 The Africa & Jiangsu province cities GDP

The Africa & Jiangsu province cities GDP showed 990~660 billion yuan by Congo~Sudan in 1980 in terms of Figure 1 while their y-y value indicated -17%~ -0.7% respectively to show the Congo stronger economic strength and weak speed and Ivory Coast absolutely minus growth speed with -35%.

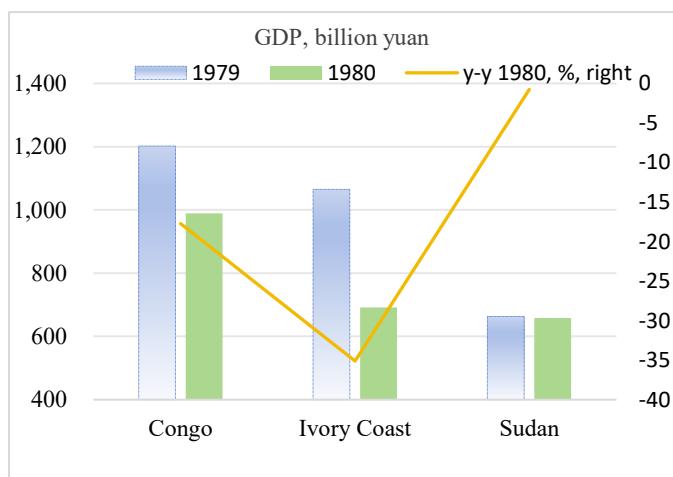

Figure 1 The Africa & Jiangsu province cities GDP. [7]

Furthermore, the Africa & Nigeria cities GDP showed 1.150~0.71 trillion yuan by Congo~Sudan in 1980 in terms of Figure 2 while their y-y value indicated 22%~ 18% respectively to show their stronger economic strength & speed.

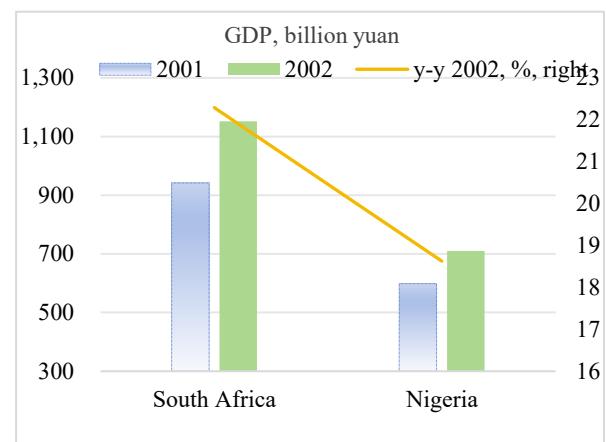

Figure 2 The Africa & Jiangsu province cities GDP I. [7]

On the other hand, the Africa & Nigeria cities GDP showed 5.900~2.400 billion yuan by Egypt~Suzhou city in 2002 in terms of Figure 3 while their y-y value indicated -8.8%~ 26% respectively to show the the latter ie., Suzhou higher economic speed. In contrast, the Morocco maintained 15% exhibited high economic growth speed.

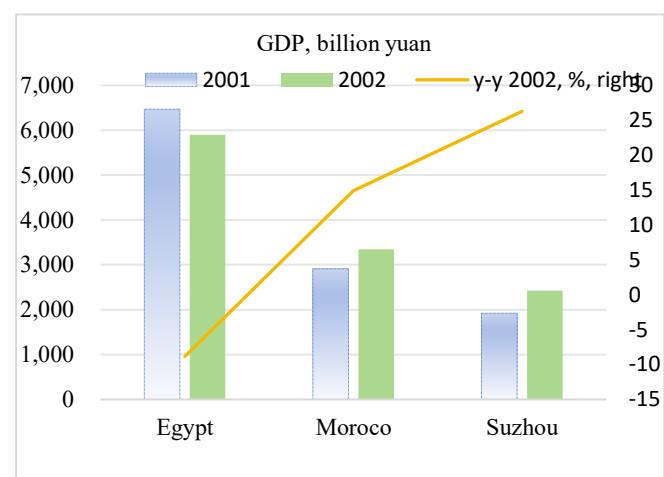

Figure 3 The Africa & Jiangsu province cities GDP II. [7]

At the same time, the top four~five Africa & Jiangsu province cities GDP in 2024 showed 1,600~1,200 billion yuan by Wuxi~Nantong cities respectively shown Wuxi & Ethiopia stronger economic strength.

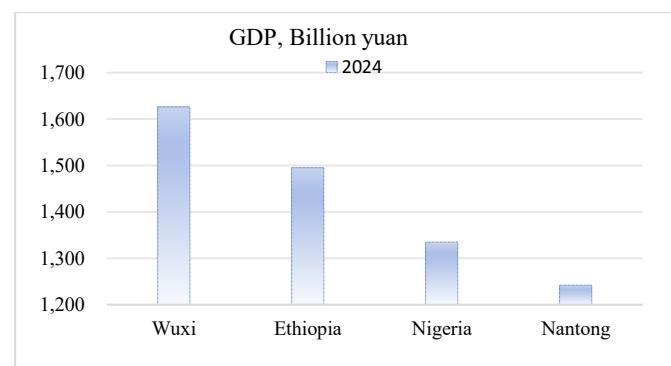

Figure 4. The top four~five Africa & Jiangsu province cities GDP in 2024. [7]

On the other side, the top three Africa & Jiangsu province cities GDP in 2024 showed 2,800~1,850 billion yuan by South Africa~Algeria ones respectively shown the former & Suzhou with 2,670 billion dollars stronger economic strength.

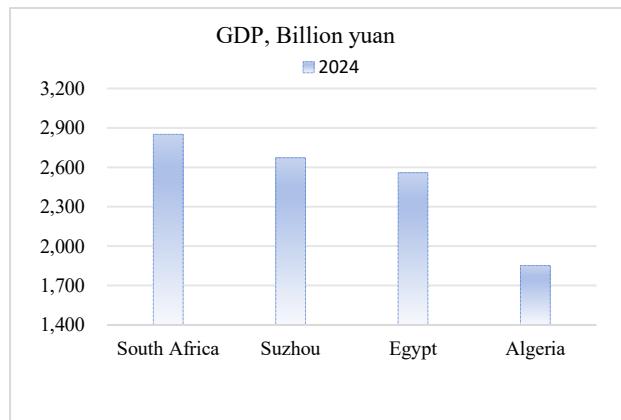

Figure 5. The top three Africa & Jiangsu province cities GDP in 2024. [9]

2.5 The industrial production

The industrial product's calculation method will use output that is about to calculate directly industrial enterprise producing total product included substantial goods market value total sum. Detailing formula will be as following. The industrial gross product $= \sum$ (all kinds of product quantity \times

corresponding one's unit price) [8] The industrial production indicated 1.7~0.07 trillion dollars by USA~India in 1991 in light of Figure 6 while their y-y 1992 value attained 3.5%~ 2% respectively to show USA strong industrial community and Japan following USA become second industrial community. In contrast, the China economy speed provided 12% highest growth to boost its internal huge market.

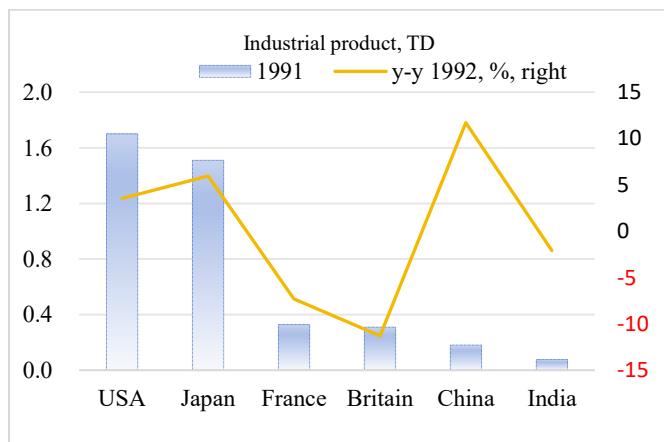

Figure 6. The industrial production analysis. [2]

Overview, the high-technology product will meet our modernized requirement day by day, so our experimental laboratory and factory research & development departments would continually produce the innovation ones for us to

share and enjoy from now on. Firstly the former will look forwards to finding some new things like new function and material processes, and secondly the mature ones will be transferred to factories to trial sample towards the customer downstream maker and dealer, then thirdly the new product may be introduced into the market and consumer in the end. Thereby the more sophisticated and advanced function and lowering cost, enhancing effect path and measure still will be searched for sustainably. [16~28]

3. Conclusions

The national GDP will reflect and monitor one nation even regions economy development status where through comparing with others in various time and date the advantage and disadvantage may be observe. Hence, we will grasp the fitting value for GDP & y-y value so as to boost our economic developing situation with a proof to show the rapidness and slowness degree by government institution which may make a blue-diagram for next year even middle plan after several year. Whereas, we will plan our investment & health a certain for the sake of enjoying the high-level-quality modern life earlier. On the other side, the high-technology products like rechargeable battery used in the EV(electric vehicle) and robot will be prevalent currently and future which may provide continuous power for it to drive longer like 200 kilometers per charge, so its usefulness will be more searchable and searching item for us to process later. New one like the solid-state battery as a new innovation will be used in EV in future widely, which may become a high-light for our scientists to process continuously. At the same time, the scientist needs to publish their achievement continually to journal with high impact factor for the readers to know the situation and feasibility. The author like scientist in college would complete the investigation content and form the formal achievement in the sake of communicating with readers with using English skills well. Thereby the correct and clarified information might transfer into the readers acknowledgement who has an interest to know the meaning from papers. Therein the published one will overview from the author readers through editor help. We should pay more attention to the innovative aspects which may take up some new idea and paths. As for scientist he needs to continuously search for the new project for the sake of further searching for the deeper and wider field all the time.

Funding

This paper was supported by Korean Science and Engineering Fund (KSEF) under the granted No. 96-0300-11-01-03 with the specified Basis Research program.

Ethic Declarations

The authors declared that there were not conflicts of interest.
