Article History	Abstract
<b>Original Research Article</b>	<p><i>The financial product will include gold producing amount in the form of exchange-traded funds (ETFs) which play a significant role in financial markets. It can prevail in traded ones that involve buying and selling risks, therein the risky investment will enhance its current property as a relatively stable &amp; safe one that carry out the gold producing amount business largely. So in this paper we will discuss the one to compare with various nations for the sake of promoting GDP enhancement. On the other side, the GDP as an important indicator influences overall living standards, so that through comparing various time and regions the variation may be exhibited as an experience learning and controlling. We should make a decision with the precisest value to represent the current economy situation for the next year strategic plan to put in front of people. This year China GDP will evaluate to 5.2% by November 2025 upon our economists forecast. Within the financial crisis in 2008 up to now the world economy maintained a depressive mood and threshold special for the developed ones. However, the China will create potential domestic market foreign trade has achieved significant growth. Meantime, India, as an emerging economic power, will raise up in future. But the USA, Britain, France etc traditional developed economies are growing slowly, maybe they feel tired and difficulty adapting to new innovations. So that we should surpass the nations and leading to the world new force because we still have elasticity to overwhelm the world difficulty in future. Enhancing for multi-nations foreign trade amount continually to push the economy lively and become the world economy leader. With socialism advancement under monitoring by government and regulation we can conquer the capitalism dis-advancement and participate in the actual activity positively like making policy and investment correctly with emphasizing subject of Marxism philosophical views. At last the industrial product will be an important factor to influence nation GDP value and important combined part, therein we must emphasize it to propose to the agenda because its second position besides tertiary industry as a new one.</i></p> <p><b>Keywords:</b> prospering economic GDP per capita enhancement, financial reformation, innovation, scientist, with sustainability, industrial production.</p>

### 1. Introduction

The GDP (gross domestic product) which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality productivity. Hence we should consider the effective factors for example the

population quantity, new quality productivity with high-technique etc. Like big plane electric vehicle battery AI robot quantum computer medicine making disease diagnosis AI (artificial intelligence), ocean source space exploration etc. other ones. Low population is enable to offer high life & quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP

value and help us to boost the economic recovery and many things to do. So the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population increasing rate mutually and cooperatively. Hence the two aspects may be emphasized and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more preciously and correctly according to the near past years experience and variation.

Therefore, the high-technique products will be completed through wielding our scientist & senior Engineers coordination tightly for the sake of reviving the industrial and tertiary modernization. We should constantly look for and seek the new quality productivity sustainably so as to take place of our traditional industry becoming modernity. An innovation industry like new energy electric generator will be in front of our path forwards, so that the corresponding tactic must be put up and seek the opportunity and fortune in order to burden our responsibility quickly and not to forget recommend the fitting one to appoint new occupation. Like the Bole identified horse or Maosui self-recommended the recommendation will be represent one aspect for our human resource department to consider and evaluate the recommended included a full research room with a set of computer high-technique instrument & device, subordinate, subsidiary staff, salary, house, welfare etc. a series of work so as to appoint his new occupation reasonably and willingly. [1~11]

## 2. Discussions

The industrial product might be the same with exciting our scientist and engineers confidence for the sake of enhancing our high-technology product constantly with an innovation view. As knew it can take up new industrial innovative result for us to pursuit and grasp knowledge and experience armed by new technology spirituality which may last long time until next generation innovation exhibition completely and clearly. We can imagine the world one hundred years

later we know some scenarios from the novel story and movies. There will be many spacecraft that is to be created with advance technology and they fly from one place to another for the sake of completing save human mission. Maybe our earth-out-space & planet will be conquered somewhat so as to save earth resource and safe they have to transit into near planet for the reserving another route once the earth risk occurring we must get away the earth, or we will die in earth. No matter what will be we primarily seek to enhance our industrial product for promoting our GDP value, that is best way to want doing firstly.

### 2.1 USA & China gold producing amount

The USA & China gold producing amount showed 59 tons & 65 tons by China and USA respectively in 1987 in light of Figure 1 whilst their y-y 1987 per year value indicated 2.5%~19% exhibited the USA strong gold producing capacity and development speed.

Figure 1 The USA & China gold producing amount. [1]

Meanwhile, the USA & China gold producing amount showed 50 tons & 43 tons by China and USA respectively in 1984 in terms of Figure 2 whilst their y-y 1984 value indicated 12%~39% exhibited the USA strong gold producing capacity and development speed.

Figure 2 The USA & China gold producing amount I. [1]

## 2.2 New power motor sale ranking & analysis in December, 2025

The new power motor sale amount in Nov, 2025 showed 81,000~33,000 by the HMZH~Li Auto respectively in terms of Figure 3 while their year-on-year growth attained 90%~32% accordingly exhibited the LMZH, Leap Motor etc strong vehicle producing capacities. In contrast, the Equation Panther y-y indicated 339% recorded the highest vehicle producing speed.

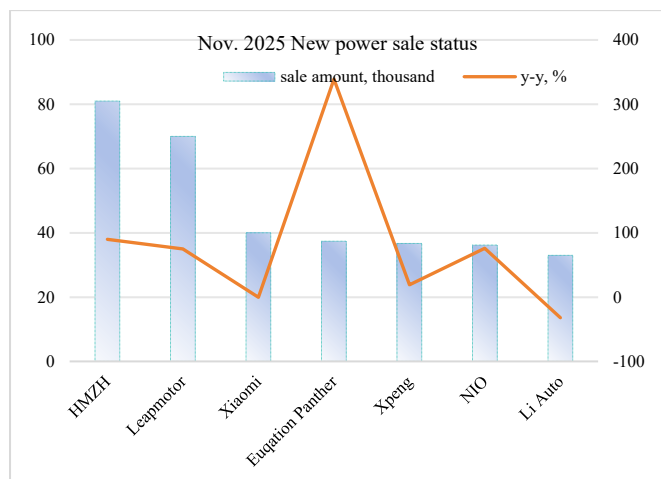

Figure 3 The new power motor sale amount in Nov, 2025. [2]

## 2.3 Sydney, Chongqing & Tianjin GDP cities' analysis

The Sydney, Chongqing & Tianjin GDP analysis showed 22 billion dollar~1.5 billion ones by Sydney~Tianjin city in 1980 respectively in terms of Figure 4 whilst their y-y 1980 indicated 13%~4% accordingly exhibited the Sydney strong economic strength.

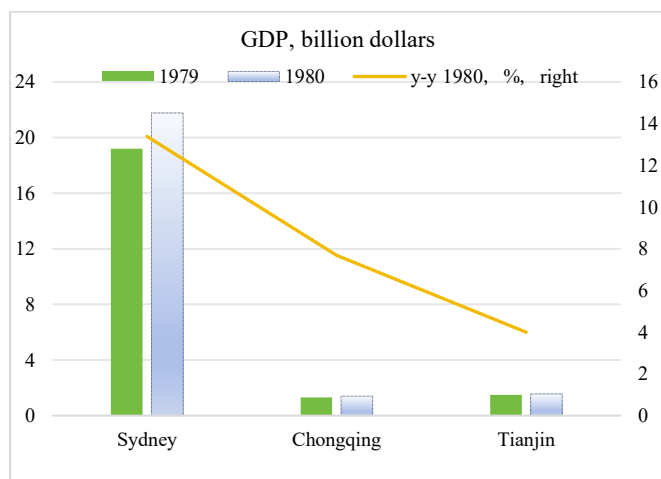

Figure 4. The Sydney & Chongqing GDP analysis in 1979~1980. [3]

## 2.4 China & India GDP per capita comparison

The China & India GDP per capita data in 1982~1983 exhibited 290 & 230 dollars in 1983 in terms of Figure 5 showed the same value whilst their y-y 1983 value attained 5% & 14% accordingly then expressed the China rapid economy development speed.

Figure 5. The China & India GDP per capita data in 1982~1983. [4]

Meanwhile, the China & India GDP per capita data in 2023~2024 exhibited 2,742 & 13,440 dollars in 2025 in terms of Figure 6 showed the China huge economy strength whilst their y-y 2024 value attained 5.5% & 1.7% accordingly then expressed the their middle economy development speed.

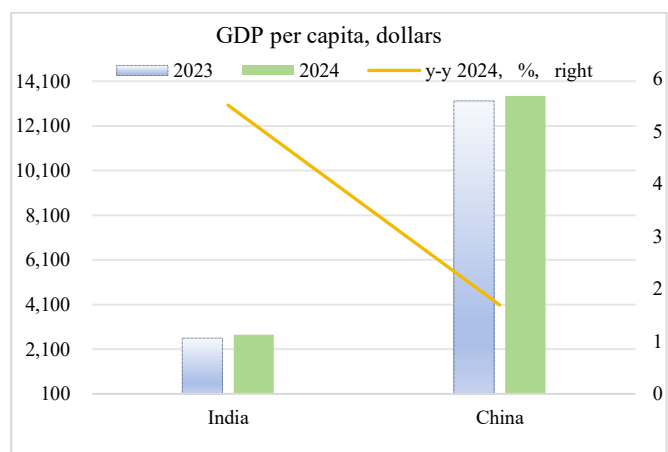

Figure 6. The China & India GDP per capita data in 2023~2024.

Overview, the high-technology product will meet our modernized requirement day by day, so our experimental laboratory and factory research & development departments would continually produce the innovation ones for us to share and enjoy from now on. Firstly the former will look forwards to finding some new things like new function and materials procedure, and secondly the mature ones will be transforming into factory to trial sample towards the customer downstream maker and dealer, then thirdly the new product may be pushed into market and consumer in the end. Thereby the more sophisticated and advanced function and lowering cost, enhancing effect path and measure still will be searched for sustainably. [12~16]

## 3. Conclusions

The financial product will include gold producing amount in the form of exchange-traded funds (ETFs) which play a significant role in financial markets. It can prevail in traded ones that involve buying and selling risks, therein the risky investment will enhance its current property as a relatively

stable & safe one that carry out the gold producing amount business largely. So in this paper we will discuss the one to compare with various nations for the sake of promoting GDP enhancement. On the other side, the GDP as an important indicator influences overall living standards, so that through comparing various time and regions the variation may be exhibited as an experience learning and controlling. We should make a decision with the precisest value to represent the current economy situation for the next year strategic plan to put in front of people. This year China GDP will evaluate to 5.2% by November 2025 upon our economists forecast. Within the financial crisis in 2008 up to now the world economy maintained a depressive mood and threshold special for the developed ones. However, the China will create potential domestic market foreign trade has achieved significant growth. Meantime, India, as an emerging economic power, will raise up in future. But the USA, Britain, France etc traditional developed economies are growing slowly, maybe they feel tired and difficulty adapting to new innovations. So that we should surpass the nations and leading to the world new force because we still have elasticity to overwhelm the world difficulty in future. Enhancing for multi-nations foreign trade amount continually to push the economy lively and become the world economy leader. With socialism advancement under monitoring by government and regulation we can conquer the capitalism dis-advancement and participate in the actual activity positively like making policy and investment correctly with emphasizing subject of Marxism philosophical views. At last the industrial product will be an important factor to influence nation GDP value and important combined part, therein we must emphasize it to propose to the agenda because its second position besides tertiary industry as a new one.
