Article History	Abstract
Original Research Article	<p><i>The nation's GDP (gross domestic product) will influence the one's economy development badness &amp; goodness as an economic indicator. So that it can be simulated by economists in advance to forecast its approximation value according to the data mastered by us. An then, the detail and actual data may be published in accordance with each provinces and cities' actual value so as to correctly reflect the nation economy situation. With regards to developing of one nation the human live condition will be better and approaching a high level more and more under the higher GDP value exhibition. So that we should consider and calculate more carefully to indicate the correct value for the sake of promoting continuously economy status and building a comfortable society day by day by our experts and scientists. On the other hand, the high-tech product is able to increase the GDP ratio gradually according to developing situation presently. It is to believe that the ratio will raise a certain one in near future because it has high-knowledge &amp; high-science factor within knowing it to producing it from the transfer of laboratory to factory. So that the new product enables to exhibit in its market after it was made in a factory continuously through using our scientist and engineers behaviour positively. We must encourage the high-tech proceeding engineers etc. who will transform the idea stimulus into the searching behaviour in lab with other researchers through acquiring a certain project from the funding so as to erect the experience and knowledge after several years that makes the sample into product entering current market to complete the receiving the order and transiting the cuisine to customers. That will be said that automatic changing to artificial intelligence one in order to promote the time and efficiency at all through the huge change said "let it do" changed to "it can do". we should continuously enhance its function and upgrade it &amp; make its stability that means it can undergo a long time to serve as a like humanoid robot that may sometimes exhibit in our canteen as an automatic and artificial intelligence one to save some money while promoting its quality and efficiency concept.</i></p> <p><b>Keywords:</b> innovation; Nations GDP strength, Nations generating electricity amount status, Archives of Engineering and Technology, research.</p>

## 1. Introduction

The nations & regions GDP will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the

increasing change so as to evaluate the increasement and declination value precisely. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow economy step. So we judge the economy developing enhancement and decrease through that y-y value for a certain period. Thereby, the detail discussion will include in the following

aspects. The GDP which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality-productivity. Hence we should consider the effective factors for example the population quantity, new quality productivity with high-technique etc. like big plane electric vehicle battery AI robot quantum computer medicine making disease diagnosis AI(artificial intelligence), ocean source space exploration nuclear generator etc. other ones. Low population enables to offer high life & quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population increasing rate mutually and cooperatively. Hence the two aspects may be emphasized and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more precisely and correctly according to the near past years experience and variation. [1~15]

## 2. Discussions

We should learn and develop relevant project and subject to reveal the core one after their phenomena. Then we master that technique to apply to that kind of substance making ability through the engineers and scientists transformed to the R & D (research & development) department in makers. Therein, a sample will change into launch product by us to search for which may bring out new functional precise and quick responding to our request up to now. We should go on developing our similar functional equipment continually. At the same time, the scientists could complete defined projects through expending several years in universities and institutions for the sake of acquiring their high degree and some experiences for them continuously to process those cutting-edge-field projects independently and

cooperatively. Thereby, we should foster and find them from the relevant activities like contest and achieved papers in high-impact-factor journal etc. we should need many of those experts level talents from universities' activity and mathematical contest who may occupy the top ten ones with excellent level score. [16~17]

### 2.1 Nations GDP strength

The nations GDP level between Germany & China might show 245~99 billion dollars accordingly in 1970 in light of Figure 1 to express their strong economy capacity. The y-y value might indicate 19% & 12% accordingly explained their forwards steps.

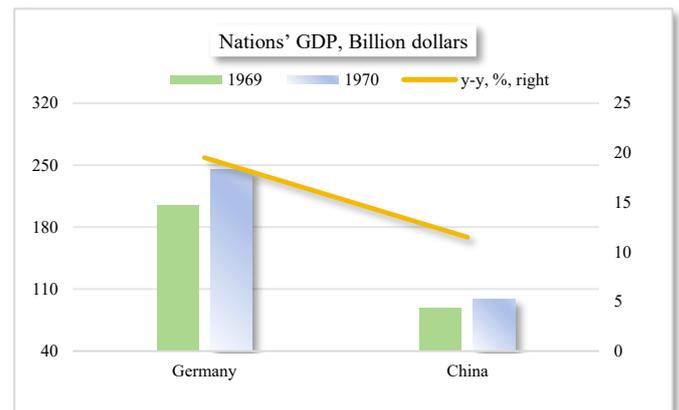

Figure 1 The nations GDP level between Germany & China. [1]

At same time, the nation's GDP level between Britain & Pakistan might show 145~10 billion dollars accordingly in 1970 in light of Figure 2 to express the Britain strong economy capacity. The y-y value might indicate 15% & 10% accordingly explained their forwards steps.

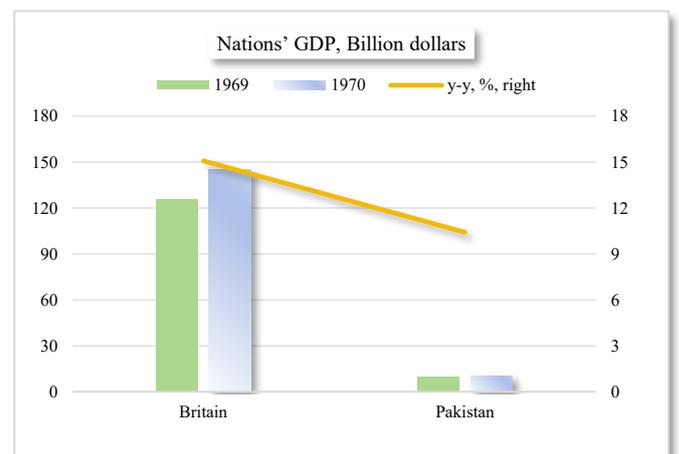

Figure 2 The nations GDP level between Britain & Pakistan. [1]

At the same time, the nations GDP level between Britain & Pakistan might show 93~5 billion dollars accordingly in 1963 in light of Figure 3 to express the Britain strong economy capacity. The y-y value might indicate 11% & 15.5% accordingly explained their forwards steps.

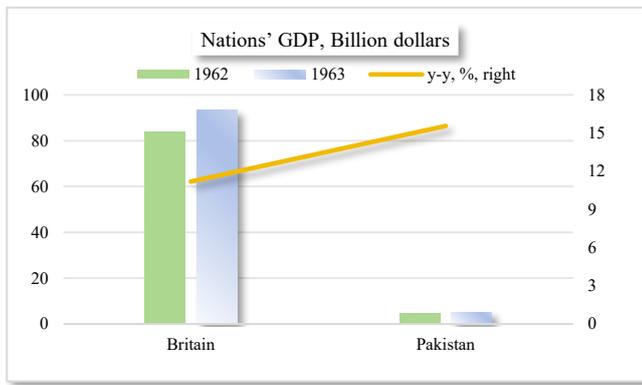

Figure 3 The nations GDP level between Britain & Pakistan in 1962~1963. [1]

## 2.2 Nations generating electricity amount ranking

The nations generating electricity amount between India & Saudi Arabia might show 935~247 TWh accordingly in 2009 in light of Figure 4 to express their strong generating electricity capacity. The y-y value might indicate 6.8% & 14% accordingly explained the Saudi Arabia forwards step whilst the Russia remained the minus step.

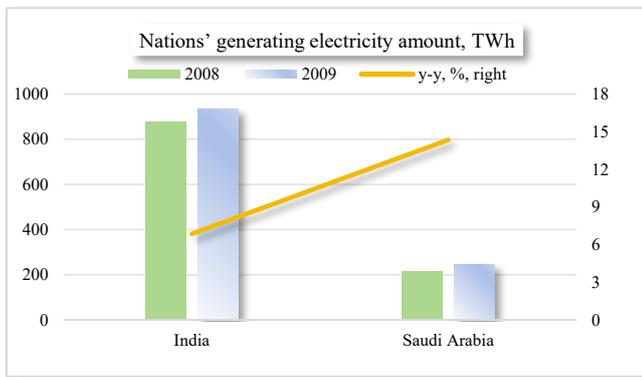

Figure 4 The Nations generating electricity amount between India & Saudi Arabia. [2]

The nations generating electricity amount between China & Russia might show 4,185~1,035 TWh accordingly in 2009 in light of Figure 5 to express their strong generating electricity capacity. The y-y value might indicate 13% & 4% accordingly explained the China forwards step whilst the Russia remained the modest step.

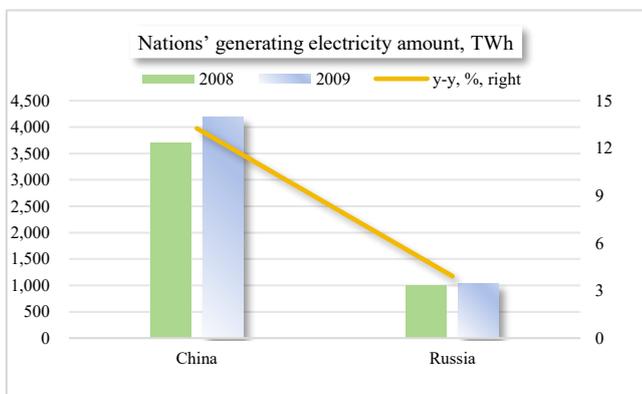

Figure 5 The Nations generating electricity amount between India & Saudi Arabia. [2]

At the end, the nations generating electricity amount between India & Saudi Arabia might show 436~110 TWh accordingly in 1995 in light of Figure 6 to express the India strong generating electricity capacity. The y-y value might indicate 9% & 3.7% accordingly explained the India forwards step whilst the Saudi remained the modest step.

## 2.3 Introduction to the Journal of Medical Research and Health Sciences

It aims to improve health status and quality of care for individuals, families and communities. The Health Science Journal (Print ISSN : 2589-9023, Online ISSN: 2589-9031) aspires to provide the scientific knowledge through the publication of peer-reviewed, high quality, scientific papers and other material on all topics related to Biochemistry, Biotechnology, Health engineering, Epidemiology, Genetics, Nursing, Pharmacology, Pharmacy, Public health, Psychology, Physical therapy, and Medicine ensuring a rapid turn-around time possible for reviewing and publishing of articles freely for research, teaching and reference purposes. Thereby, we delight to invite you to join us for submitting your cherish paper contributed to each one hopefully. [3]

## 2.4 Subject for the Archives of Engineering and Technology

As for the Doctor and Professors, Archives of Engineering and Technology will release its next publication. We have recently come across your impressive works and believe that your expertise would greatly enrich our journal. I appreciate your professionalism and knowledge after a view at your recent articles. We welcome the manuscript and it was our immense pleasure to feature in our upcoming issue. Hope you kindly forward the manuscript below mentioned link: Online Submission. If you are unable to submit by our Online Submission, you can directly forward your unpublished manuscript to this Email as an attachment. Please note that deadline for submissions is March 30<sup>th</sup>, 2026. Please submit your, Research interest to join our editorial board. Please note If

you want to be an Editorial board membership. The eligibility is minimum Ph.D. or M.D. So that, we are delighted to invite you to submit your cherish paper contributed to each one honestly. [4]

Overall, the GDP increasement will coordinate the infrastructure and industrial innovation, and the latter includes high-technique product making ones. We may continually improve our capacity to make a new high-level product for the sake of promoting our industrial development with a certain value each year. The other one will be foreign trade exportation that may help us earn the foreign money to use in later urgent time. So the industry, learning, research & usefulness etc. procedures will be boosting that combines into university, institution, factory & office four aspects cooperative spirits and culture for the sake of building a good future. Thereby, the certain high-level experts and scientists will help us to realize early the comprehensive and expertise knowledge about searching for some difficult projects that may increase the high-technique contained amount with their deductive models with mathematical knowledge and experience ones. So there will be so many achievement for us to proceed and make mature products within the technique transformation from base to application eventually dedicated to the demands of this society.

### 3. Conclusions

The nation's GDP (gross domestic product) will influence the one's economy development badness & goodness as an economic indicator. So that it can be simulated by economists in advance to forecast its approximation value according to the data mastered by us. An then, the detail and actual data may be published in accordance with each provinces and cities' actual value so as to correctly reflect the nation economy situation. With regards to developing of one nation the human live condition will be better and approaching a high level more and more under the higher GDP value exhibition. So that we should consider and calculate more carefully to indicate the correct value for the sake of promoting continuously economy status and building a comfortable society day by day by our experts and scientists. On the other hand, the high-tech product is able to increase the GDP ratio gradually according to developing situation presently. It is to believe that the ratio will raise a certain one in near future because it has high-knowledge & high-science factor within knowing it to producing it from the transfer of laboratory to factory. So that the new product enables to exhibit in its market after it was made in a factory continuously through using our scientist and engineers behaviour positively. We must encourage the high-tech proceeding engineers etc. who will transform the idea stimulus into the searching behaviour in lab with other researchers through acquiring a certain

project from the funding so as to erect the experience and knowledge after several years that makes the sample into product entering current market to complete the receiving the order and transiting the cuisine to customers. That will be said that automatic changing to artificial intelligence one in order to promote the time and efficiency at all through the huge change said "let it do" changed to "it can do". we should continuously enhance its function and upgrade it & make its stability that means it can undergo a long time to serve as a like humanoid robot that may sometimes exhibit in our canteen as an automatic and artificial intelligence one to save some money while promoting its quality and efficiency concept.

### Funding

This work was supported by the Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03 under the Specialized Basis Research program.
