Article History	Abstract
Original Research Article	<p><i>The exportation goods will be included in total GDP value with a certain rate as a tertiary industry, so the more exportation goods kinds and amount will determine one nation's tertiary achievement partly. With regards to the more exportation kinds & amount will help us to attain the increasing GDP content because the more surplus can be gained by us. Thereby, the foreign exportation & importation total amount may represent one nation goods positively active status that may help our GDP amount to increase with high degree. With producing more high-technique product our those kinds product can wield more and more influence on the entire GDP's high-technology products with their industrial chains getting more completeness and maturity skill for making high-end and green ones sustainably. Therein, we need to grasp the whole procedure skills as soon as early because it may create more high-quality and low-cost ones at final. On the other hand, the cities GDP can reflect those big urban with first-line, second one even third one will become an important effectiveness to the provinces even the nation, which let us emphasize their potential entities like metropolitan Beijing Shanghai Guangzhou & Shenzhen cities whose GDP value may record the highest scale for us to estimate and work there since there will be more opportunities and money to earn and invest. Shanghai & Shenzhen stock exchange center will exhibit huge monitor to express the stock index change for many of us to consider its money chance. At the same time, there must be many talents to join the work position at the high-end-product making manufacturer after they finished the subject education with certain skills recruited by maker human resource department in famous factories. So that we need to continue to support them especial in AI and automatic equipment that may bring up many new experiences to follow the global developed field for making more innovation product like family robot factory one and store one etc. many occasions for the more convenient applications and payment machine in big malls.</i></p> <p>Keywords: <i>proceeding China provinces GDP per capita, Chinese cities GDP analysis, new research.</i></p>

1. Introduction

The nations & regions GDP will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value precisely. The positive y-y value may mean the good and rapid economy developing status whilst the minus one may state the bad and slow

economy step. So, we judge the economy developing enhancement and decrease through that y-y value for a certain period. Thereby, the detail discussion will include in the following aspects. The GDP which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality-productivity. Hence we should consider the effective factors for example the population quantity, new

quality productivity with high-technique etc. like big plane electric vehicle battery AI robot quantum computer medicine making disease diagnosis AI(artificial intelligence), ocean source space exploration nuclear generator 5G communication etc. other ones. Low population enables to offer high life & quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population increasing rate mutually and cooperatively. Hence the two aspects may be emphasized and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more precisely and correctly according to the near past years experience and variation. [1~25]

2. Discussions

2.1 China provinces GDP per capita

The China provinces GDP per capita might show 128 & 192 dollars by Jiangsu & Shandong provinces accordingly in 1985 to indicate their strong economy strength in light of Figure 1. The y-y value might attain about 25% by them both expressed their forwards development steps.

Figure 1 The China provinces GDP per capita. [1]

The China provinces GDP per capita might show 128 & 192 dollars by Zhejiang & Fujian provinces accordingly in 1985 to indicate their strong economy strength in light of Figure 2. The y-y value might attain 32% & 23% by them

accordingly expressed their forwards development steps.

Figure 2 The China provinces GDP per capita I. [1]

At final, the China provinces GDP per capita might show 128~192 dollars by Fujian~Zhejiang provinces accordingly in 1986 to indicate their strong economy strength in light of Figure 3. The average value between them might attain 164 dollars, so there would be two provinces beyond that value ie. Jiangsu following Zhejiang ones.

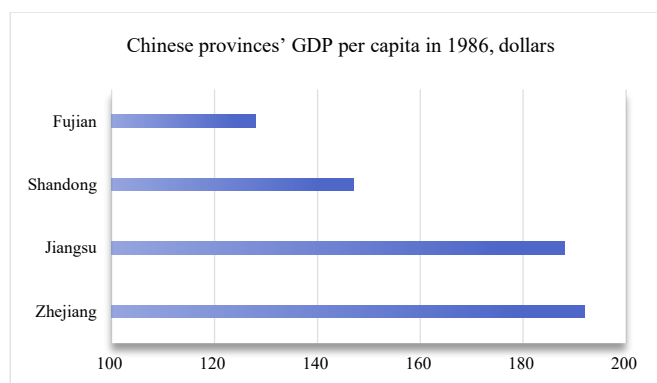

Figure 3 The China provinces GDP per capita II. [1]

2.2 Chinese cities GDP analysis

The China cities GDP might show 23 & 22 billion yuan by Yangzhou & Wuhan cities accordingly in 1991 to indicate their good economy strength in light of Figure 4. The y-y value might attain 29% & 22% by them accordingly expressed their more forwards growth steps.

Figure 4 The China cities GDP variations. [2]

At the same time, the China cities GDP might show 23 & 22 billion yuan by Dalian & Qingdao cities accordingly in 1991 to indicate their good economy strength in light of Figure 5. The y-y value might attain 18% both of them expressed their forward growth steps.

Figure 5 The China cities GDP variations I. [2]

At the same time, the China cities GDP might show 6 & 7 billion yuan by Yangzhou & Wuhan cities accordingly in 1987 to indicate their good economy strength in light of Figure 6. The y-y value might attain 17% by both of them expressed their more moderate growth steps.

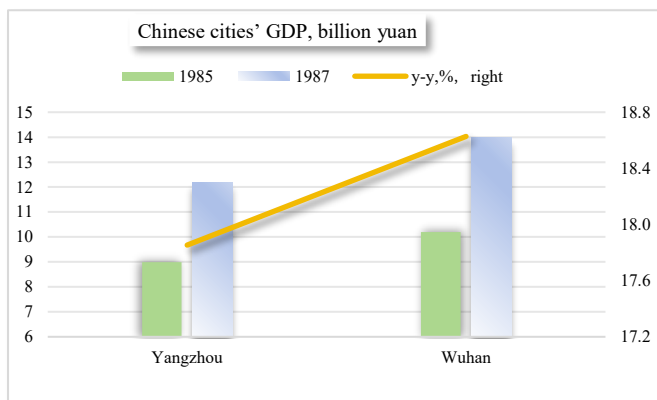

Figure 6 The China cities GDP variations II. [2]

Overview, we will collaborate closely with cross-functional teams to identify emerging trends and validate hypotheses through iterative experimentation. The leverage shared insights to refine technical frameworks, ensuring alignment between theoretical advancements and practical applications. Meantime, shall integrate feedback loops for continuous improvement, enhancing the adaptability of solutions in dynamic environments. So that we should advocate the positive tactic to foster the excellent preparation team to gain the prize item like Nobel prize laureates that releases the Physics Chemistry & Physiology Medicine items by the Swedish Royal Academy of Science and Karolinska Institute each year respectively. They are going to become the leadership at the related cutting-edge field.

3. Conclusions

The high-level scholars like scientist and experts has possessed the ability around reforming current technique barrier whose excellent ones may gain the Nobel prize about six~ten every year to show the new phenomenon and theory sustainably. Thereby they become the leader position in world scientific activity. So that we should cultivate more those scientists in each cutting-edge field prepared to be selected by Swedish royal academy of sciences and Karolinska Institute release the Physics and Chemistry & Physiology and Medicine respectively. On the other side, the national & regional GDP with different ones can monitor the entire economy activities within one year and more than one year like ten years. As for enhancing that one the economy activities including consuming business behavior and working at advance factories for earning money and even retirement salary simultaneously. Thereby the working position will become an important thing for us to earn more money for the sake of using after retirement. Certainly our consuming behavior can increase the goods quantity and quality that may activate economic thriving one. Thereby enhancing GDP has to promote high-technology product with owning a better beneficial price for us to earn more money for stabilizing our old years. Please try to consider if one has no enough money how he may live normally and happily many years later, hereby we must put our capital into the Social Security Bureau with enough money and time more than 20 years. At the same time the scientist must write their papers continually to famed journal so as to maintain some achievement in research activity. Hence he may acquire titled as an academician in China academy of Science & Engineering maintaining a permanent title which may carry out bonus permanently per month after he becomes old. We must continually process our research on innovation field to find new phenomenon and project in detail subject. Don't forget to cooperate with others already grasping some internal cause-effect relation to enlarge the relevant skill into products which may bring in new wind on the searching route of technology.

Ethic Declarations

The authors declared that there were not conflicts of interest.
