1. Introduction

The nations & regions GDP will represent their comprehensive strength in views of economy level and quality, so searching it may have an important effectiveness for us to process statistic with the national producing amount every month, season and year. In the meantime, the value with y-y has also a significant meaning that reflects the economy growth step because we should clarify the increasing change so as to evaluate the increasement and declination value precisely. The positive y-y value may mean the good and rapid economy developing status whilst

the minus one may state the bad and slow economy step. So, we judge the economy developing enhancement and decrease through that y-y value for a certain period. Thereby, the detail discussion will include in the following aspects. The GDP which indicates national economic status has provided an important role in every aspect in the world. So that the population increasing rate would be maintained for the sake of raising high-technique product with the entire industrial chain constantly which might enhance our new-quality-productivity. Hence we should consider the

effective factors for example the population quantity, new quality productivity with high-technique etc. like big plane electric vehicle battery AI robot quantum computer medicine making disease diagnosis AI(artificial intelligence) ocean source space exploration nuclear generator etc. other ones. Low population enables to offer high life & quality with improving GDP per capita value. Meanwhile, it can enhance the national whole GDP value and help us to boost the economic recovery and many things to do. So the certain population is about to improve our national confidence some degree and make us to become priority one as early as possible even the super-country to lead the world to leadership right.

In contrast, the GDP increasing rate may play a significant role with regulating population increasing rate mutually and cooperatively. Hence the two aspects may be emphasized and paid attention to in thriving the whole national economic developed degree through enough wielding our generations positively and efficiently by our government institution endeavor and evaluation. For the sake of making relevant policies and allocating capital into the necessary industries the corresponding strategic plan needs to be made under various background and entities. Then the according monitor and estimation will be followed and estimated periodically and frequently by the observer in government's institution. At last as to the developed speed in one nation the corresponding population increasing quantity and high-technique product producing will be discussed and considered more precisely and correctly according to the near past years experience and variation. [1~24]

2. Discussions

We should learn and develop relevant project and subject to reveal the core one after their phenomena. Then we master that technique to apply to that kind of substance making ability through the engineers and scientists transformed to the R & D(research & development) department in makers. Therein, a sample will change into launch product by us to search for which may bring out new functional precise and quick responding to our request up to now. We should go on developing our similar functional equipment continually. At the same time, the scientists could complete defined projects through expending several years in universities and institutions for the sake of acquiring their high degree and some experiences for them continuously to process those cutting-edge-field projects independently and cooperatively. Thereby, we should foster and find them from the relevant activities like contest and achieved papers in high-impact-factor journal etc..we should need many of those experts level talents from universities' activity and mathematical contest who may occupy the top ten ones with excellent level score. [23~24]

2.1 Nations' Goods Exportation changes analysis

The Nations goods exportation change might show 220~190 billion dollars by US~Japan accordingly in terms of Figure 1 to indicate their high expectation level in 1985. The y-y value might attain 2%~12% by them correspondingly to show forwards development step changes.

Figure 1 The Nations goods exportation changes. [1]

Meantime, the Nations goods exportation change might show 30 & 9 billion dollars by China & India accordingly in terms of Figure 2 to indicate their high expectation level in 1985. The y-y value might attain 10% & 0.3% by them correspondingly to show forwards development step changes.

Figure 2 The Nations goods exportation changes I. [1]

Meantime, the Nations goods exportation change might show 7 & 4 billion dollars by China & India accordingly in terms of Figure 3 to indicate their high expectation level in 1973. The y-y value might attain 37% & 40% by them correspondingly to show most forwards development step changes.

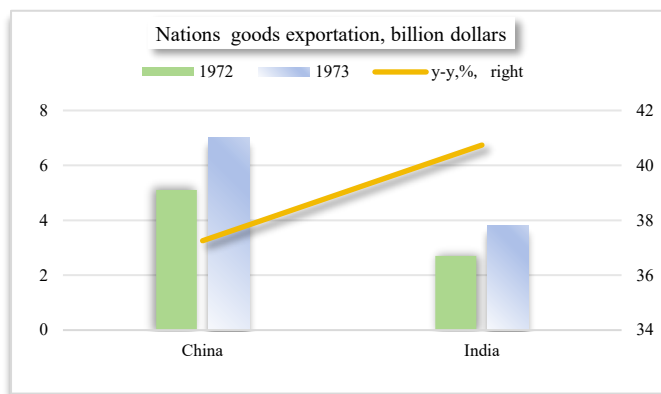

Figure 3 The Nations goods exportation changes II. [1]

At final, the Nations goods exportation change might show 96~54 billion dollars by US~Japan accordingly in terms of Figure 4 to indicate their high expectation level in 1973. The y-y value might attain 53% &45% by US &Germany correspondingly to show most forwards development step changes.

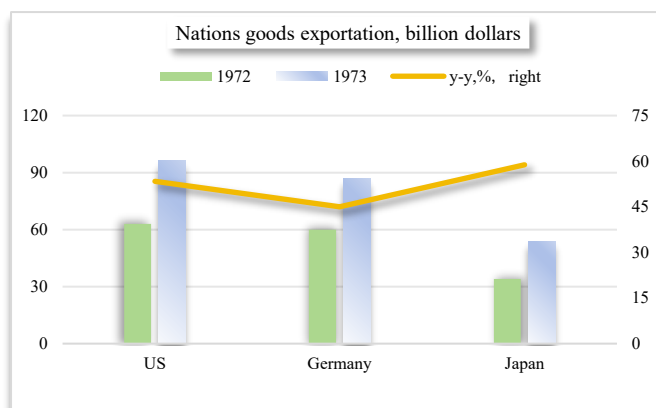

Figure 4 The Nations goods exportation changes III. [1]

2.2 Hebei top cities GDP analysis

The Hebei top six cities GDP might show 72~215 billion yuan by the Xingtai~Tangshan cities in 2005 accordingly in terms of Figure 5 to exhibit Tangshan, Shijiazhuang and Cangzhou etc high economy strength. Meantime, the average value in 2005 might indicate 9.5 billion yuan where there were five cities beyond that value included Tangshan~Handan cities.

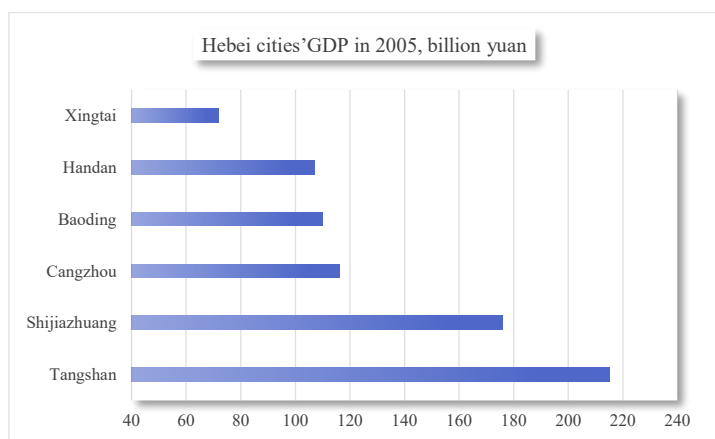

Figure 5 The Hebei cities top six GDP. [2]

Furthermore, the Hebei top seven~eleven cities GDP might show 39~65 billion yuan by the Chengde~Langfang cities in 2005 accordingly in terms of Figure 6 to exhibit Langfang, Hengshui &Qinhuangdao etc. high economy strength.

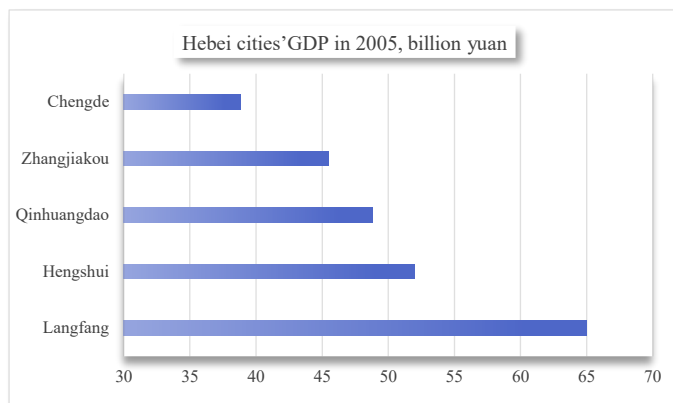

Figure 6 The Hebei cities top seven~eleven GDP. [2]

Summarily, in this paper the detail GDP value is going to be discussed as above parts through comparing the various regions for the sake of enhancing corresponding tactic in next year and futural several years. Eventually the regional GDP will be compared with their variation and then confidently make a strategic plan for concluding the past years and erecting new targets that we pay much attention to raise our predicting value all the time. It is clarified that with regulating our aim the good achievement will be finishing in future that makes us to be more confident year by year for the sake of realizing the plan at present and in certain future. On the other side, the cutting-age-field product making skills would be meeting from the reliability to the stability even long longevity on a product life period. Some potential new function is still under discovery status so that we should insist on the deepening study to understand further know-how to ingest those mysterious veil for us to approach freely for the sake of making it into new functional equipment circulating in society.

3. Conclusions

The exportation goods will be included in total GDP value with a certain rate as a tertiary industry, so the more exportation goods kinds and amount will determine one nation's tertiary achievement partly. With regards to the more exportation kinds & amount will help us to attain the increasing GDP content because the more surplus can be gained by us. Thereby, the foreign exportation & importation total amount may represent one nation goods positively active status that may help our GDP amount to increase with high degree. With producing more high-technique product our those kinds product can wield more and more influence on the entire GDP's high-technology products with their industrial chains getting more completeness and maturity skill for making high-end and

green ones sustainably. Therein, we need to grasp the whole procedure skills as soon as early because it may create more high-quality and low-cost ones at final. On the other hand, the cities GDP can reflect those big urban with first-line, second one even third one will become an important effectiveness to the provinces even the nation, which let us emphasize their potential entities like metropolitan Beijing Shanghai Guangzhou & Shenzhen cities whose GDP value may record the highest scale for us to estimate and work there since there will be more opportunities and money to earn and invest. Shanghai & Shenzhen stock exchange center will exhibit huge monitor to express the stock index change for many of us to consider its money chance. At the same time, there must be many talents to join the work position at the high-end-product making manufacturer after they finished the subject education with certain skills recruited by maker human resource department in famous factories. So that we need to continue to support them especial in AI and automatic equipment that may bring up many new experiences to follow the global developed field for making more innovation product like family robot factory one and store one etc. many occasions for the more convenient applications and payment machine in big malls.

Ethic Declarations

The authors declared that there were not conflicts of interest.
