1. Introduction

The high-technique product and skill will become more significant than ever because AI (artificial intelligence) technique replaces the automatic and man-work flow-lines in a maker largely according to News report. So that those

high-tech skill will transform into the product making ability may occupy a more important task for our scientist and engineers to deal with. Therein, the many AI Robots have to enter the maker workshop to efficient work for men

will be prevalent and low cost. At the same time, the AI Robot making makers will stand in the mount peak to proceed all kinds of experiment trials and expand those function software and hardware that may be instructed collaboratively by the university PhD who grasped some important message. Through contacting those cooperation experiment with parameters like temperature, time and deviation scope grasping conditions might be exhibited between them which may play an important effectiveness on how to produce the new product more precisely and having low-cost features. Another one will erect the product equipment like processing machine, automatic flow-equipment which may be depending on the out-source-enterprise with the demand condition. Then the scientists will give his opinions to the deviation endurance which makes the possible making capacity upwards and looks forwards to enduring more time without main error.

The tertiary industry would involve on service business like high-technique-service office for enterprises influence in one region whose making purchase order and complaint so as to request more orders from the maker in neighbor maker and sale centers. They will transfer message from the ultimate customer to factory for improving their some function continuously as a consultation company. On the other hand, the whole GDP increasement might influence the tertiary one reversely due to enough income could raise our consumption capacity, special in service business. However the which business we could proceed the GDP factors will be enhanced from their physical & brain labors. Thereby, whatever you pursued the certain dedication to our society progression at all.

At the end the tertiary one role is made strong more and more when seeing the GDP value, therefore more and more stores and offices will be allocated in city for the sake of acquiring more information about their products. Meantime, the special sale stores will be much than ever like Huawei handphone and i-pad even portable computer which is a high-light in a department lobby. Their aim at increasing sale amount is one aspect firstly, then sell EV etc. new concept electric auto is two one. As we knew the price difference between them might attain more than 50 times. So that the perspective will be watched special in the tertiary industry which may create more profitable mediate-life consumption less than ten years. Maybe after decade the humanoid robots would enter our life like family, coffee store & canteen in light of present tendency and development, so we might share the automatic time in advance. [1~25]

2. Discussions

The scientist who could be trained by university would have capability to finish the important task within defined

experiment and theoretic explanation for his pursuit of research theme. So there would be some experiences and methods to process those difficult somewhat with independence and cooperation for both of occasions. Thereby, from their achievement papers published in high-impact journal and famous one the feasibility could be seen for us to make him to process the sophisticated item and projects. There might be so many chances to keep up with presently searching advanced theme that may have influence the high-technique making field in advance. The technology will be the first productivity so we have to emphasize it whenever and wherever we proceed the entity to be stood. So that the innovation high technique would be requested in that aspect like transforming technique information to practical application product and equipment due to the software programme and hardware conquered by us up to know. Thereby, the scientist must publish his achieved papers to exhibit their importance how to allocate to the fit position.

2.1 Introduction to the International Journal of Engineering Inventions

The International Journal of Engineering Inventions (IJEI) is peer reviewed International Journal. IJEI publishes original research articles, review articles and technical notes. IJEI offers worldwide indexing to all published papers with IJEI. Meantime, the peer-reviewed IJEI Journal is started with a mission to encourage contribution to research in Science and Technology and encourage and motivate researchers in challenging areas of Sciences and Technology. It is noted that the below several aspects include in. 1. Submit your paper in MS Word (.doc or .docx) as per manuscript guidelines; 2. IJEI also provides hard copy of certificates to all authors free of cost at their postal address; 3. Publish both online as well as print version both; 4. Engineering & Science Technology. The IJEI Indexing involves and indexed in major indexing like Google Scholar, Issue, Academia, Research Gate, Index Copernicus, Jour Info, ANED, ESCI World etc. Thereby, we are delighted that your submission to our one contributed to the common development promptly and timely with cheaper chargeable fee. [1]

2.2 Subject for the International Journal of Epidemiology and Public Health Research

We would like to invite you to contribute a paper for publication in our upcoming issue for the (IJEPHR). It would be grateful if you would submit a paper for our upcoming issue. Research Article/ Review/Case Reports/Short Communication/Editorial/Perspective/Mini Review/ Magazine/Book Review/Analysis /Opinion/Commentary Articles etc., are welcome for possible publication in this issue. Thereby, we are pleased

that your submission to our one contributing to the common development promptly with cheap chargeable fee. [2] We would appreciate receiving your submission on or before April 30th, 2026.

2.3 China & Brazil GDP per capita

The China & Brazil GDP per capita analysis might show 13 & 10 thousand dollars by China & Brazil accordingly in light of Figure 1 exhibited their moderate economy level in 2025. The y-y value might indicate 1.5% & 0.5% by them respectively to show China faster developed step than Brazil then.

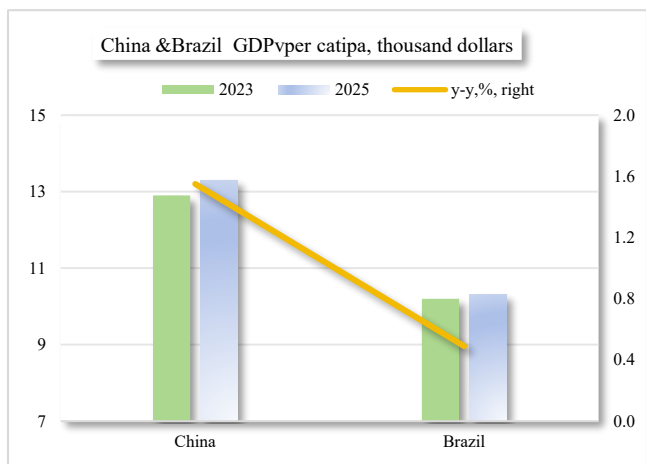

Figure 1 China & Brazil GDP per capita analysis. [3]

The China & Brazil GDP per capita analysis might show 4 & 9 thousand dollars by China & Brazil accordingly in light of Figure 2 exhibited their moderate economy level in 2009. The y-y value might indicate 29% & 20% by them respectively to show China definitely faster developed step than Brazil then.

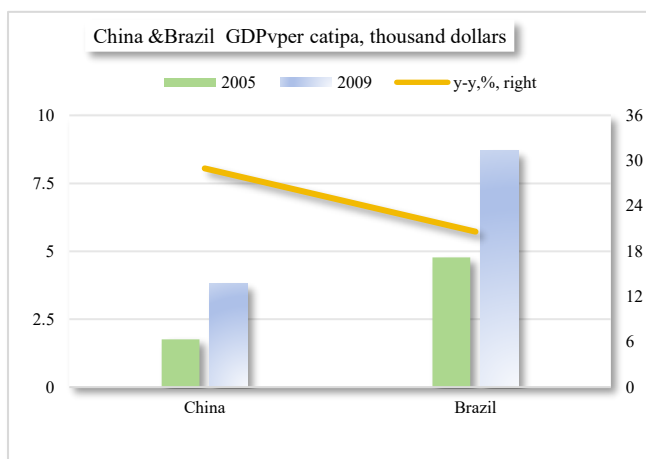

Figure 2 China & Brazil GDP per capita analysis I. [3]

At final, the China & Brazil GDP per capita analysis might show 2 & 6 thousand dollars by China & Brazil accordingly in light of Figure 3 exhibited their moderate economy level in 2006. The y-y value might indicate 18% & 27% by them respectively to show Brazil faster developed step than China then.

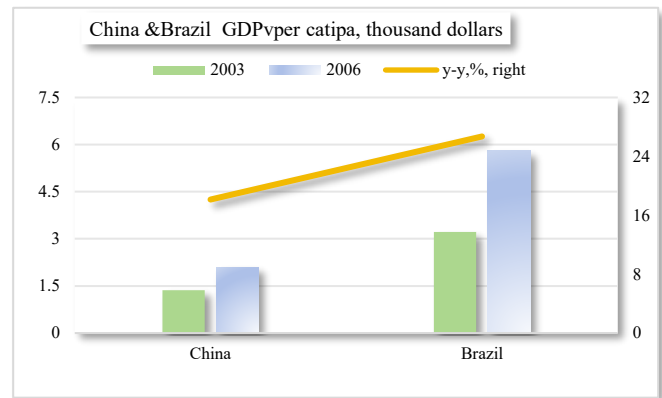

Figure 3 China & Brazil GDP per capita analysis II. [3]

2.5 Swiss & Chinese top ten provinces GDP analysis

The China provinces & Swiss GDP analysis might show 180 & 92 thousand dollars by Swiss & Taipei accordingly in light of Figure 4 exhibited the Swiss higher economy level in 1986. The y-y value might indicate 32% & 24% by them respectively to show Swiss faster developed step than Taipei then.

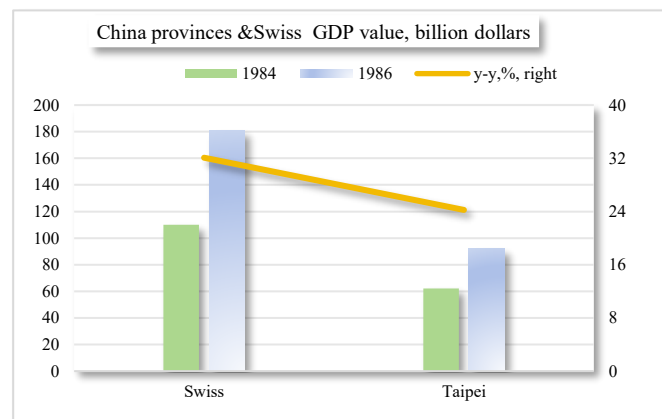

Figure 4 The China provinces & Brazil GDP analysis. [4]

The China & Swiss GDP per capita analysis might show 46 & 12 thousand dollars by HK & Shandong one accordingly in light of Figure 5 exhibited the HK higher economy level in 1986. The y-y value might indicate about 17% by both of them to show HongKong a little faster developed step than Shandong then.

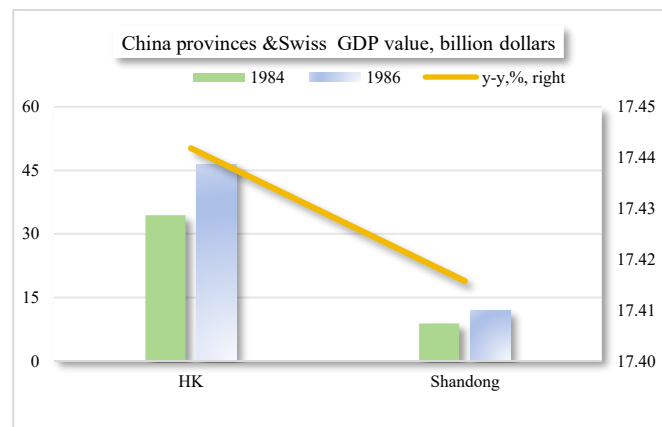

Figure 5 The China provinces & Brazil GDP analysis I. [4]

At the same time, the China & Brazil GDP per capita analysis might show 11~9 thousand dollars by Guangdong~Liaoning one accordingly in light of Figure 6 exhibited their modest economy level in 1986. The y-y value might indicate about 26% & 21% by them accordingly to show Guangdong one a little faster developed step than Liaoning one then. In contrast, the Jiangsu one would maintain the highest 13 billion dollars then.

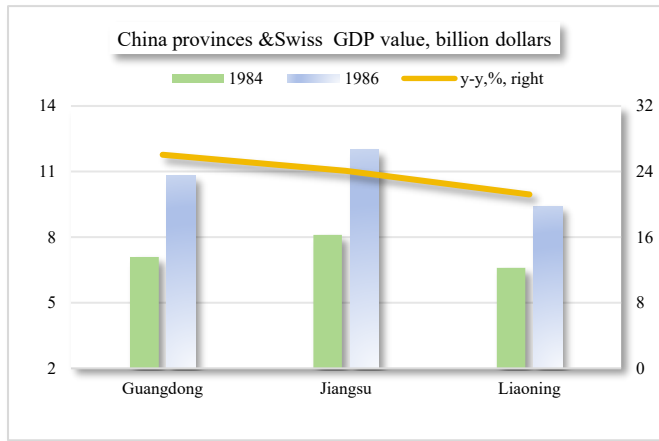

Figure 6 The China provinces & Brazil GDP analysis I. [4]

The China & Brazil GDP per capita analysis might show 7 & 8 thousand dollars by Sichuan & Zhejiang one accordingly in light of Figure 7 exhibited their modest economy level in 1986. The y-y value might indicate about 19% & 27% by them respectively to show Zhejiang province a little faster developed step than Shandong & Henan provinces then.

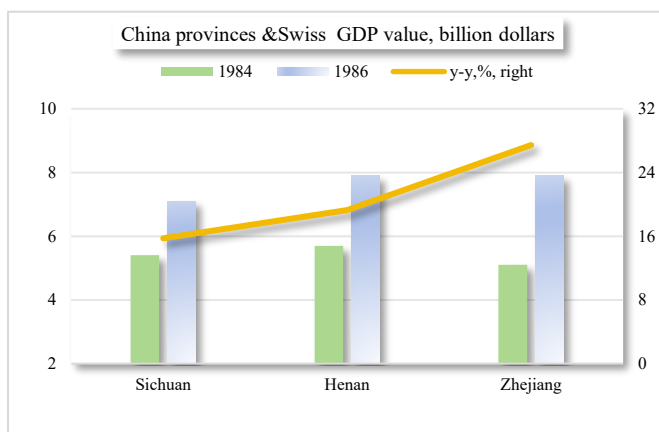

Figure 7 The China provinces & Brazil GDP analysis II. [4]

Summarily, the technique of electronic field will become an important factor to wield its influence in many aspects within agriculture manufacture tertiary industry that may help us to sense the automatic procedures now with adding the relevant computer and electronic communication will complete the blank page, maybe the artificial intelligence product will dominate the future promise business and industry definitely in light of trending situation. So that a lot of employees recruited from the university and institute

might occupy more and more position in maker and colleges. So with some technique staffs will be more prevalent in research & development department at maker teams. They will complete the soft-program design and development besides some of them proceed the hardware cultivation continuously from earth surface to space experiment with little gravity. Thereby, the high-technique experience and capacity will change the GDP three aspects largely in future which may boost GDP content with highness refinement edge, sharpness etc. innovation techniques. On the other hand, the decreasing unemployment rate through erecting more makers in the society will be providing more work-opportunity for the sake of declining leisure labors and raising service quality and efficiency. So that the more graduates from universities may become important human resource to work for their designing process which could improve our economy increasing status in the end.

3. Conclusions

Due to developing emerging products the high-technique skill and capacity would become more important presently, so the research to it has to be urgent and critical now than ever because the increasing GDP (gross domestic product) task in front of our modernization & industrialization. Our university now searches for innovation experiment data for the sake of acquiring the practically substantial phenomena for one or two procedures and resolution method as for a defining experimental progress within three months or less than that. Thereby, the scientist and scholars may propose their experimental data and achievement in famous journals continuously and sustainably that might push the cutting-edge-field experience and practical process conditions. Then the high-technology skill will be transformed into the sample and launch products so as to deduce those emerging equipment and goods for public market with the convenience & precision like AI (artificial intelligence) humanoid robot producing and with constant update and fix the wrong operation etc. problems for us to solve. With regards to sustainable high-tech product making factors they should be low-cost and high-quality at final for entry to market as early as possible as a period trial and judgement. So that the whole industrial-chain would emerge in the up-stream and down-stream involved many factories request many opportunities for solving many employments problem that might raise the GDP enhancement directly. Another one will indicate the EV (electric vehicle), PHEV (plug-in hybrid electric vehicle) that might represent the presently making industry mainly as an important second industry one to mean the main tide for us to drive more and more special in several years later. Thereby, the solid chargeable-battery will indicate a promise one replaced traditional liquid battery that is to

high-electric-capacity, high-efficiency and low chargeable-time for our experts to consideration like rocket engine used that one to implement its launch into the space for finishing surrounding earth-orbit-track. So that laboratory experiment so as to develop those new substances with high-efficiency and high mass-ratio to push the technique completing from simple to advancement course. Therefore, the government institution should enhance more the new emerging industrial programme with capital support largely for the sake of progressing the new one continual development and extension.

Ethic declarations

The authors declared that there were not conflicts of interest.

Funding

This work was supported by the Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03 under the Specific Basis Research Program.
