Article History	Abstract
<b>Original Research Article</b>	<p><i>The high-technology product is to change our life big due to its owning the humanoid-like mind with artificial intelligence technique designed by soft-engineer according to its meeting occasions. With using the neural network technique those robots enable to drive themselves to complete the 3D task like dirty difficult dangerous different adding the video model chip into controlled by themselves and human outsides for the sake of completing the impossible-man task. For example about Fukusima nuclear matter using small robots entered cabin to investigate the internal construction in the blast reaction-pile, which may be our pride &amp; pleasure. At the same time, the technique of electronic field will become an important factor to wield its influence in many aspects within agriculture manufacture tertiary industry that may help us to sense the automatic procedures now with adding the relevant computer and electronic communication will complete the blank page, maybe the artificial intelligence product will dominate the future promise business and industry definitely in light of trending situation. So that a lot of employees recruited from the university and institute might occupy more and more position in maker and colleges. So with some technique staffs will be more prevalent in research &amp; development department at maker teams. They will complete the soft-program design and development besides some of them proceed the hardware cultivation continuously from earth surface to space experiment with little gravity. Thereby, the high-technique experience and capacity will change the GDP three aspects largely in future which may boost GDP content with highness refinement edge sharpness etc. innovation techniques. On the other hand, the decreasing unemployment rate through erecting more makers in the society will be providing more work-opportunity for the sake of declining leisure labors and raising service quality and efficiency. So that the more graduates from universities may become important human resource to work for their designing process which could improve our economy increasing status in the end.</i></p> <p><b>Keywords:</b> An Innovation Study, nations GDP analysis, sustainably.</p>

### 1. Introduction

The high-technique product and skill will become more significant than ever because AI (artificial intelligence) technique replaces the automatic and man-work flow-lines in a maker largely according to News report. So that those

high-tech skill will transform into the product making ability may occupy a more important task for our scientist and engineers to deal with. Therein, the many AI Robots have to enter the maker workshop to efficient work for men

will be prevalent and low cost. At the same time, the AI Robot making makers will stand in the mount peak to proceed all kinds of experiment trials and expand those function software and hardware that may be instructed collaboratively by the university PhD who grasped some important message. Through contacting those cooperation experiment with parameters like temperature, time and deviation scope grasping conditions might be exhibited between them which may play an important effectiveness on how to produce the new product more precisely and having low-cost features. Another one will erect the product equipment like processing machine, automatic flow-equipment which may be depending on the out-source-enterprise with the demand condition. Then the scientists will give his opinions to the deviation endurance which makes the possible making capacity upwards and looks forwards to enduring more time without main error.

The tertiary industry would involve on service business like high-technique-service office for enterprises influence in one region whose making purchase order and complaint so as to request more orders from the maker in neighbor maker and sales centers. They will transfer message from the ultimate customer to factory for improving their some function continuously as a consultation company. On the other hand, the whole GDP increasement might influence the tertiary one reversely due to enough income could raise our consumption capacity, special in service business. However the which business we could proceed the GDP factors will be enhanced from their physical & brain labors. Thereby, whatever you pursued the certain dedication to our society progression at all.

At the end the tertiary one role is made strong more and more when seeing the GDP value, therefore more and more stores and offices will be allocated in city for the sake of acquiring more information about their products. Meantime, the special sale stores will be much than ever like Huawei handphone and i-pad even portable computer which is a high-light in a department lobby. Their aim at increasing sale amount is one aspect firstly, then sell EV etc. new concept electric auto is two one. As we knew the price difference between them might attain more than 50 times. So that the perspective will be watched special in the tertiary industry which may create more profitable mediate-life consumption less than ten years. Maybe after decade the humanoid robots would enter our life like family, coffee store & canteen in light of present tendency and development, so we might share the automatic time in advance. [1~20]

## 2. Discussions

In this paper, the scientist who could be trained by university would have capability to finish the important

task within defined experiment and theoretical explanation for his pursuit of research theme. So there would be some experiences and methods to process those difficult somewhat with independence and cooperation for both of occasions. Thereby, from their achievement papers published in high-impact journal and famous one the feasibility could be seen for us to make him to process the sophisticated item and projects. There might be so many chances to keep up with presently searching advanced theme that may have influence the high-technique making field in advance. So that the high-technology product will increase continually through the scientists judgment in terms of observing relevant material of GDP value in different regions within a certain period because the high-tech products amount affects the whole industrial chain for the sake of improving our total GDP amount. In near future, the robot in work-shop and family is about to increase largely due to enhancing the mature performance of new functional one expose with lower cost and high efficiency and high-quality continuously.

### 2.1 Nations GDP analysis

The nations GDP analysis might show 5,838 & 2,470 billion dollars by China & Britain in 2009 correspondingly to indicate the China higher economy level & capacity according to Figure 1. The y-y value per year may attain 73% & 7% by them respectively exposed the China most forwards steps then.

Figure 1 The nations GDP analysis. [1]

On the other side, the nations GDP analysis might show 5,640 & 2,660 billion dollars by Japan & France in 2009 correspondingly to indicate the Japan higher economy level & capacity according to Figure 3. The y-y value may attain about 5.5% by both of them respectively exposed their forwards steps then.

Figure 2 The nations GDP analysis I. [1]

On the other side, the nations GDP analysis might show 1,448 & 324 billion dollars by Russia & Thailand in 2009 correspondingly to indicate the Russia high economy level & capacity according to Figure 3. The y-y value may attain 13% & 10% by them respectively exposed their forwards steps then. In contrast, the Turkey had 20% most forwards y-y growth step.

Figure 3 The nations GDP analysis II. [1]

Meanwhile, the nations GDP analysis might show 79 & 30 trillion dollars by Turkey & Thailand in 1979 correspondingly to indicate their mediate economy level & capacity according to Figure 4. The y-y value may attain 16.5% & 22% by them respectively exposed their forwards steps then.

Figure 4 The nations GDP analysis III. [1]

Meanwhile, the nations GDP analysis might show 920~655 billion dollars by Russia & France in 1979 correspondingly to indicate the Japan high economy level & capacity according to Figure 5. The y-y value may attain 8.5% & 26% by them respectively exposed their forwards steps then.

Figure 5 The nations GDP analysis IV. [1]

Meanwhile, the nations GDP analysis might show 184~1,080 trillion dollars by China~Japan in 1979 correspondingly to indicate the Japan high economy level & capacity according to Figure 6. The y-y value may attain 21% & 6% by them respectively exposed their forwards steps then. In contrast, the Britain y-y value per year may indicate 43% with the most forwards nominal growth step.

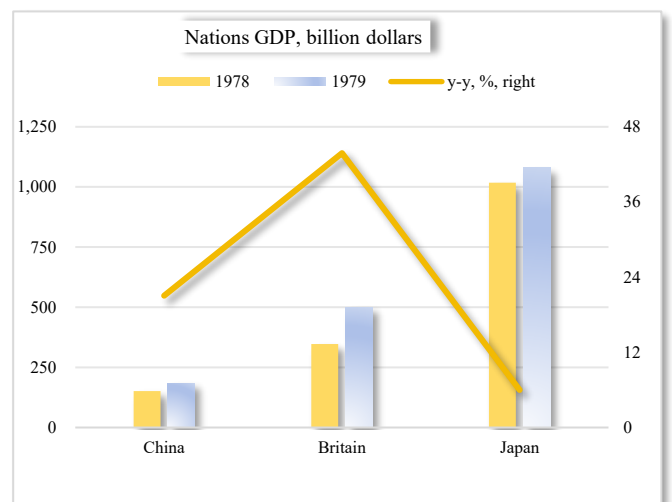

Figure 6 The nations GDP analysis V. [1]

Meanwhile, the nations GDP analysis might show 8.1 & 6.2 trillion dollars by China & Japan in 2011 correspondingly to indicate their mediate economy level & capacity according to Figure 7. The y-y value may attain 20% & 5% by them respectively exposed the China most forwards steps then.

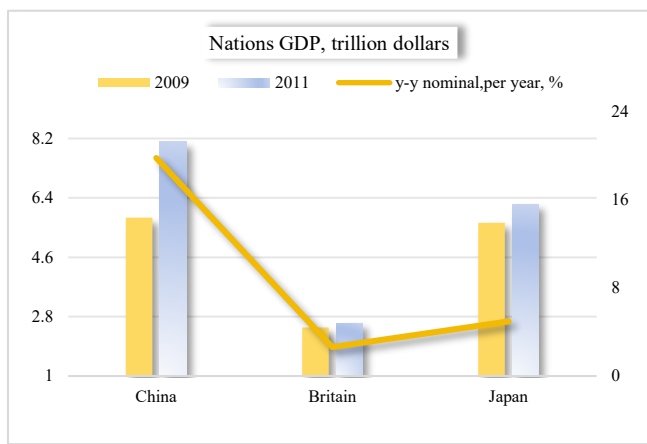

Figure 7 The nations GDP analysis VI. [1]

Summarily, the technique of electronic field will become an important factor to wield its influence in many aspects within agriculture manufacture tertiary industry that may help us to sense the automatic procedures now with adding the relevant computer and electronic communication will complete the blank page, maybe the artificial intelligence product will dominate the future promise business and industry definitely in light of trending situation. So that a lot of employees recruited from the university and institute might occupy more and more position in maker and colleges. So with some technique staffs will be more prevalent in research & development department at maker teams. They will complete the soft-program design and development besides some of them proceed the hardware cultivation continuously from earth surface to space experiment with little gravity. Thereby, the high-technique experience and capacity will change the GDP three aspects largely in future which may boost GDP content with highness refinement edge, tip etc. innovation techniques. On the other hand, the decreasing unemployment rate through erecting more makers in the society will be providing more work-opportunity for the sake of declining leisure labors and raising service quality and efficiency. So that the more graduates from universities may become important human resource to work for their designing process which could improve our economy increasing status in the end.

### 3. Conclusions

The many population may make us to promote new high-tech skill & product even capacity with rapid development speed that help to improve our GDP amount. On the other side, due to developing emerging products the high-technique skill and capacity would become more important presently, so the research to it has to be urgent and critical now than ever because the increasing GDP (gross domestic product) task in front of our modernization & industrialization. Our university now searches for innovation experiment data for the sake of acquiring the

practically substantial phenomena for one or two procedures and resolution method as for a defining experimental progress within three months or less than that. Thereby, the scientist and scholars may propose their experimental data and achievement in famous journals continuously and sustainably that might push the cutting-edge-field experience and practical process conditions. Then the high-technology skill will be transformed into the sample and launch products so as to deduce those emerging equipment and goods for public market with the convenience & precision like AI (artificial intelligence) humanoid robot producing and with constant update and fix the wrong operation etc. problems for us to solve. With regards to sustainable high-tech product making factors they should be low-cost and high-quality at final for entry to market as early as possible as a period trial and judgement. So that the whole industrial-chain would emerge in the up-stream and down-stream involved many factories request many opportunities for solving many employments problem that might raise the GDP enhancement directly. Another one will indicate the EV (electric vehicle), PHEV (plug-in hybrid electric vehicle) that might represent the presently making industry mainly as an important second industry one to mean the main tide for us to drive more and more special in several years later. Thereby, the solid chargeable-battery will indicate a promise one replaced traditional liquid battery that is to high-electric-capacity, high-efficiency and low chargeable-time for our experts to consideration like rocket engine used that one to implement its launch into the space for finishing surrounding earth-orbit-track. So that laboratory experiment so as to develop those new substances with high-efficiency and high mass-ratio to push the technique completing from simple to advancement course. Therefore, the government institution should enhance more the new emerging industrial programme with capital support largely for the sake of progressing the new one continual development and extension.
