Article History	Abstract
<b>Original Research Article</b>	<p><i>As we knew the GDP can wield its usefulness on evaluating economy status in one region within one period that may explain the goodness &amp; badness there for us to know the accurate value variation in detail. So for the sake of knowing its meaning we should consider all the aspects to exhibit the intrinsic relationships make us to know the detail joints affect our value and following life convenient conditions like the incoming, expenditure &amp; reserved money in the views of the capital route. Therefore, the high GDP (gross domestic product) value means the high expenditure like purchasing daily &amp; consumptive goods, experiencing health appliance &amp; drug, buying cars etc. all kinds of expending occasions. Hence, the high society request needs more money with regards to increasing that value that may enhance our level and quality than those lower ones in advance. The more high-tech like AI (artificial intelligence) product includes smart robot, smart flow-line assembly &amp; payment machine with multi-diversities like the third payment. So that the more sophisticated diversities will become more prevalent than ever that requests our engineer and experts to process more possible routes for our more convenience and comfort behavior and paying capital timely and accurately than past. Moreover the higher demand will make our enterprise to proceed more advancement occasions sustainably that may bring out innovation technique and products in future eventually. Through detailing investigation our experts should master the market tendency and corresponding new measures in order to increase our innovative products capacity and push into the relevant market always and continuously. With using those trial occasions all of us can experience its new function and agree to that one advantages under tolerating cheapness cost like more launch producing. Meanwhile, the basis research &amp; development in units will be advocated by the government institution to rouse the advancement function &amp; multi-functions for the sake of continuously push those smart machine to the public. Hence the high-technique may promote the tertiary industry thriving that also can increase the part GDP raising un-doubtly. At the end the educated talents like university graduates will be recruited to work in different divisions for the sake of communicating each other experiences to reach a good circulation which can help company to finish the useful advice and adopt new innovation ones sustainably and continually.</i></p> <p><b>Keywords:</b> Retrieving Nations consumption per capita &amp; Nations general birth rate variations &amp; Top international airport ranking, sustainably, an innovation study.</p>

## 1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several hundred stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because the quantization investment and evaluating stock price within 5 thousand. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips tell us following the main capital to win the game that is like a fairy tale story under the help of AI machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. [1~30]

## 2. Discussions

The GDP will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a minute. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software

skill to make the complete product more advancement and industrialization that destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel etc. new source one will be made by us continually to exhibit in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing switch by electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn to make it to increase for room temperature maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. [31~33]

### 2.1 Nations consumption per capita variations

The nations consumption per capita variations might exhibit 6 & 1.8 thousand degree by Britain & Brazil in 1997 accordingly in light of Figure 1 to show the Britain forward momentum. The y-y value would attain 1.5% & 3.3% by them respectively expressed the Brazil upward development pace.

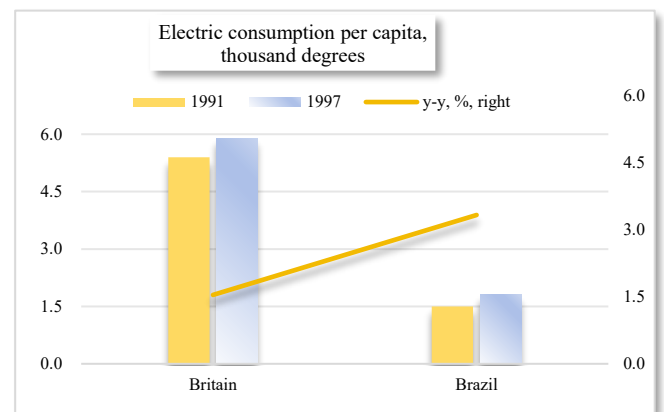

Figure 1 Nations consumption per capita. [1]

On the other hand, the nations electric consumption per capita variations might exhibit 7 & 8.7 thousand degree by France & China in 1997 accordingly in light of Figure 2 to show the China forward momentum. The y-y value would attain 1.3% & 8.7% by them respectively expressed the China upward development pace.

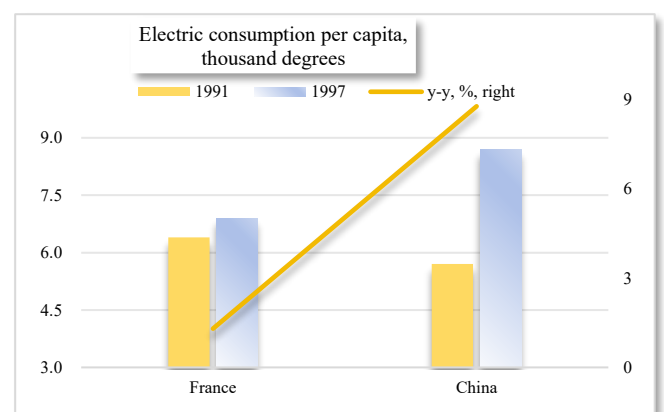

Figure 2 Nations consumption per capita I. [1]

On the other side, the nations electric consumption per capita variations might exhibit 4.4 & 2.7 thousand degree by Britain & Brazil in 2024 accordingly in light of Figure 3 to show the Britain forward momentum. The y-y value would attain 4.7% & -13% by them respectively expressed the Britain most upward development pace.

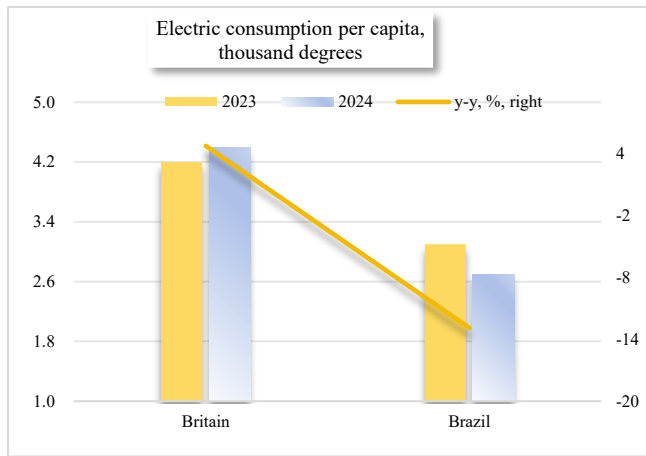

Figure 3 Nations consumption per capita II. [1]

On the other side, the nations electric consumption per capita variations might exhibit 6.8 & 6 thousand degree by France & China in 2024 accordingly in light of Figure 7 to show the France forward momentum. The y-y value would attain 6% & -14% by them respectively expressed the France more upward development pace than the China. Additionally, in the case of China the 6,000 degree means the 16.4 ones each day per one with upward electric consumption.

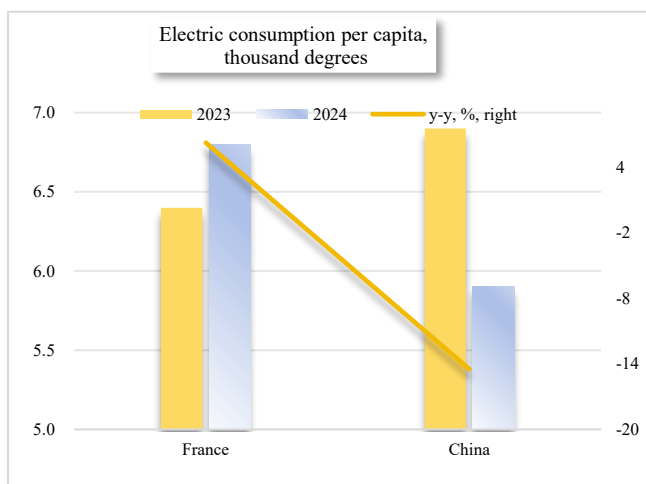

Figure 4 Nations consumption per capita III. [1]

## 2.2 Top international airport ranking

The top international airports ranking would exhibit 18.9~24.1 million men-times by Heathrow~Atlanta correspondingly in 2026 Q1 according to the Figure 5 to show the Haneda & Baiyun ones following Atlanta to become the second and third big airports with 22.7 & 22.5 million men-times.

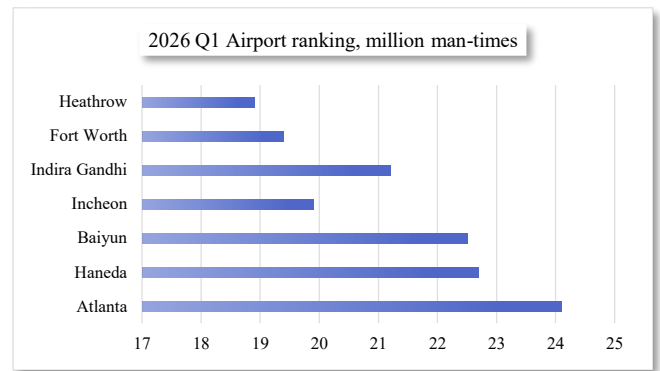

Figure 5 Top international airports ranking. [2]

## 2.3 Nations general birth rate variations

The nations general birth rate variations might exhibit 2.1% & 1.7% by France & US accordingly expressed France more forwards momentum according to Figure 6 in 1974. The y-y value indicate -3.2% & -4.6% by them respectively their backwards raising rate.

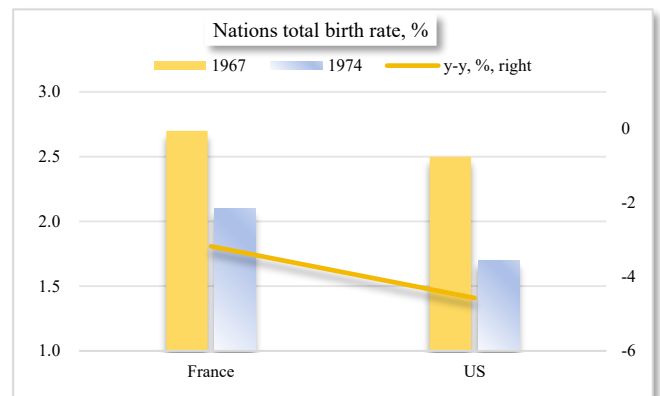

Figure 6 Nations general birth rate variations. [3]

The nations general birth rate variations might exhibit 5.2% & 3.6% by India & China accordingly expressed France more forwards momentum according to Figure 7 in 1974. The y-y value indicate -1.5% & -6% by them respectively their backwards raising rate.

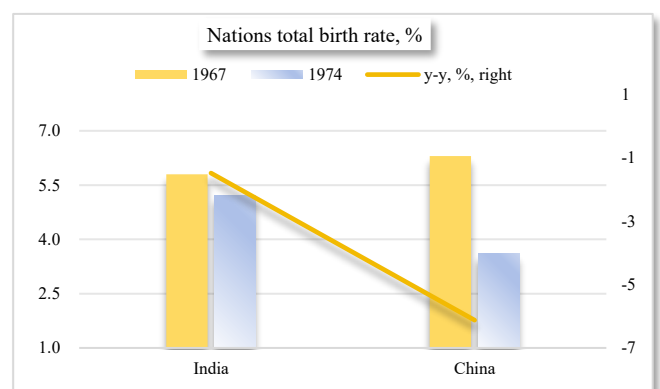

Figure 7 Nations general birth rate variations I. [3]

## 2.4 Clive Chan leaving Open AI to Anthropic AI

Below is the leaving message by Clive Chan who leaved Open AI to another company. The personal update is that I

have decided to leave Open AI. I am proud to have been part of the custom chip program and grateful to everyone I got to build with and learn from along the way. The density of hardware talent on that team is extraordinary, and I do not think there is a better chip design team anywhere. It has been a wild journey from second hardware hire, 2.4 years ago to now, and I am excited to watch these chips become one of the most important engines of AGI (artificial general intelligence). At the same time, I have not been able to shake the pull to climb a new mountain from the bottom again! I joined Anthropic AI this week because I was deeply impressed with the team's talent, value, ambition, and I am already energized by the pace and intensity of the past few days. It is the time to build. [4]

### 3. Conclusions

As we knew the GDP can wield its usefulness on evaluating economy status in one region within one period that may explain the goodness & badness there for us to know the accurate value variation in detail. So for the sake of knowing its meaning we should consider all the aspects to exhibit the intrinsic relationships make us to know the detail joints affect our value and following life convenient conditions like the incoming, expenditure & reserved money in the views of the capital route. Therefore, the high GDP value means the high expenditure like purchasing daily & consumptive goods, experiencing health appliance & drug, buying cars etc. all kinds of expending occasions. Hence, the high society request needs more money with regards to increasing that value that may enhance our level and quality than those lower ones in advance. The more high-tech like AI (artificial intelligence) product includes smart robot, smart flow-line assembly & payment machine with multi-diversities like the third payment. So that the more sophisticated diversities will become more prevalent than ever that requests our engineer and experts to process more possible routes for our more convenience and comfort behavior and paying capital timely and accurately than past. Moreover the higher demand will make our enterprise to proceed more advancement occasions sustainably that may bring out innovation technique and products in future eventually. Through detailing investigation our experts should master the market tendency and corresponding new measures in order to increase our innovative products capacity and push into the relevant market always and continuously. With using those trial occasions all of us can experience its new function and agree to that one advantages under tolerating cheapness cost like more launch producing. Meanwhile, the basis research & development in units will be advocated by the government institution to rouse the advancement function & multi-functions for the sake of continuously push those smart machine to the public. Hence the high-technique may

promote the tertiary industry thriving that also can increase the part GDP raising un-doubtly. At the end the educated talents like university graduates will be recruited to work in different divisions for the sake of communicating each other experiences to reach a good circulation which can help company to finish the useful advice and adopt new innovation ones sustainably and continually.

### Ethic Declarations

The authors declared that there were not conflicts of interest.

### Funding

This paper was supported by the Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03, under the Specific Basis Research Program.
