Article History	Abstract
<b>Original Research Article</b>	<p><i>As we knew the GDP (gross domestic product) can wield its usefulness on evaluating economy status in one region within one period that may explain the goodness &amp; badness there for us to know the accurate value variation in detail. So for the sake of knowing its meaning we should consider all the aspects to exhibit the intrinsic relationships make us to know the detail joints affect our value and following life convenient conditions like the incoming, expenditure &amp; reserved money in the views of the capital route. Therefore, the high GDP value means the high expenditure like purchasing daily &amp; consumptive goods, experiencing health appliance &amp; drug, buying cars etc. all kinds of expending occasions. Hence, the high society request needs more money with regards to increasing that value that may enhance our level and quality than those lower ones in advance. The more high-tech like AI (artificial intelligence) product includes smart robot, smart flow-line assembly &amp; payment machine with multi-diversities like the third payment. So that the more sophisticated diversities will become more prevalent than ever that requests our engineer and experts to process more possible routes for our more convenience and comfort behavior and paying capital timely and accurately than past. Moreover the higher demand will make our enterprise to proceed more advancement occasions sustainably that may bring out innovation technique and products in future eventually. Through detailing investigation our experts should master the market tendency and corresponding new measures in order to increase our innovative products capacity and push into the relevant market always and continuously. With using those trial occasions all of us can experience its new function and agree to that one advantages under tolerating cheapness cost like more launch producing. Meanwhile, the basis research &amp; development in units will be advocated by the government institution to rouse the advancement function &amp; multi-functions for the sake of continuously push those smart machine to the public. Hence the high-technique may promote the tertiary industry thriving that also can increase the part GDP raising un-doubtly. At the end the educated talents like university graduates will be recruited to work in different divisions for the sake of communicating each other experiences to reach a good circulation which can help company to finish the useful advice and adopt new innovation ones sustainably and continually.</i></p> <p><b>Keywords:</b> Retrieving the Taipei &amp; Philippine GDP analysis, New York &amp; Guangdong province GDP changes, with sustainability, an innovated study.</p>

## 1. Introduction

The potential talents need to be emphasized and trained a periodical education experience so as to raise the competition capacity each other that will take up the usefulness methods to be birthed constantly. The collaborative combination and cooperative spirit will be advocated by us so as to make an innovative item like software program making capacity besides hardware searching and exploration. From the composition to the performance the series experimental with a series of processing stages like combining compositions, processing, evaluating, processing again, evaluating longevity & making product and brain judgement like modeling erection with principle formula will indicate that first one factor to determine the predicting performance result and longevity. So we should investigate broadly and clarify the key points and then start our theoretical modeling exhibition with the help of experimental proof that may bring out many chances for us to process continually.

Meantime, the investment behavior may be proceed by the similar method with experiment and judgment capacity. The first experiment will be done several hundred stocks in exchange center use portfolio combining strategic plan and then after some time the evaluating its earning will be expressed, and the goodness with AI investment machine and mathematical deduction modeling to analyse the price changes even vibration. Thereby, the financial innovation will make us to be a rich-man that contributes to the tertiary industry enhancement eventually and ultimately. Hence, the reformation idea will occupy the first and important factor for us to master its behavior and judgement like financial one that may bring us more beneficial capital than ever because the quantization investment and evaluating stock price within 5 thousand. Thereby, the stocks evaluating system will be more prevalent and urgent for our constitution investment behavior. There are so many tips tell us following the main capital to win the game that is like a fairy tale story under the help of AI machine.

At the same time, the nations industry advancement will influence our life level like 16° electric consumption per people per day in China 2025. the more energy electric generator has to be increased gradually year by year so as to raise our GDP value eventually besides giving us more comfortable even convenience above 10 times to catch up the USA developed level. Let us do best endeavour to raise our mission for improving GDP value under cooperation and collaboration spiritual courage within R &D dept and laboratory scope that is to become our diligent destination as to so many scientist and scholars. The better way to be successful is still made by ourselves in different occupations that may create huge power to push the high-technique forwards sustainably whilst the achievement can

be published in a journal with fluently English narration once we had any spiritual inspirations. [1~28]

## 2. Discussions

The GDP will affect our country level and quality that may change our life style because the high-technique product enters our daily life every a minute. We should appreciate the engineers and experts to take out new technology for us to share due to combining many high-techniques software skill to make the complete product more advancement and industrialization that destroy the traditional economy eventually. The renewable energy like photovoltaic generator, wind turbine one, nuclear generator, hydrogen fuel etc. new source one will be made by us continually to exhibit in front of public. On the other hand, the heat-supplier will be regulated by one house in a building with increasing and decreasing switch by electric releasing role. In the developed country it is essential function, so if you go out to let the heat decrease and when you turn to make it to increase for room temperature maintaining a normal situation in winter. Thereby, the electric consumption will retain in a high level and capacity. The new electric generator may be used from the nature renewable source with green and low carbon fuel atmosphere like photo, wind, nuclear pile & hydraulic one. [29~32]

### 2.1 Taipei & Philippine GDP analysis

The Taipei & Philippine GDP changes analysis might show 2,442 & 694 billion yuan correspondingly in 1998 according to Figure 1 exhibited the Taipei province higher economy momentum than Philippine one with 3.5 times between them then. The y-y value might attain 25% & 30% by them accordingly to express the latter Philippine forwards developed pace.

Figure 1 Taipei & Philippine GDP changes analysis. [1]

Moreover, the Taipei & Philippine GDP changes analysis might show 98 & 55 billion yuan correspondingly in 1979 according to Figure 2 exhibited the Taipei province higher economy momentum than Philippine one then. The y-y value might attain 57% & 21% by them accordingly to express the former Taipei forwards developed pace than the latter.

Figure 2 Taipei & Philippine GDP changes analysis I. [1]

Furthermore, the Taipei & Philippine GDP changes analysis might show 29 & 30 billion yuan correspondingly in 1974 according to Figure 3 exhibited their higher economies momentum. The y-y value might attain 30% & 7.7% by them accordingly to express the former Taipei forwards developed pace than Philippine one.

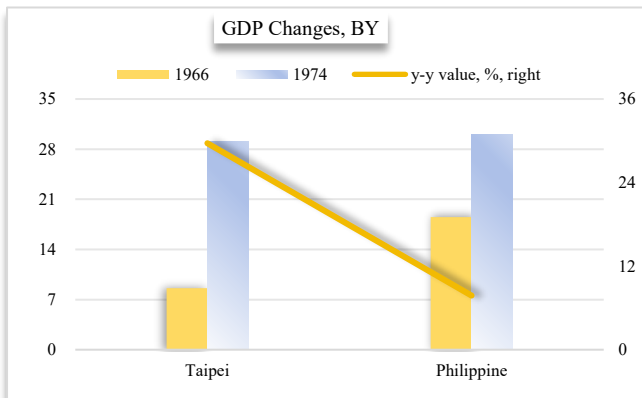

Figure 3 Taipei & Philippine GDP changes analysis II. [1]

## 2.2 New York & Guangdong province GDP changes

The New York & Guangdong province GDP changes analysis might show 1,215 & 399 billion dollars correspondingly in 2011 according to Figure 4 exhibited the New York state higher economy momentum than Guangdong province with around 3 times between them then. The y-y value might attain 5% & 14% by them accordingly to express the Guangdong province forwards developed pace than the New York city.

Figure 4 The New York & Guangdong province GDP analysis. [2]

Furthermore, the Florida & Shandong province GDP changes analysis might show 769 & 587 billion yuan correspondingly in 2011 according to Figure 5 exhibited the Florida state higher economy momentum than Shandong province then. The y-y value might attain 2.5% & 15% by them accordingly to express the Shandong province forwards developed pace than the latter state.

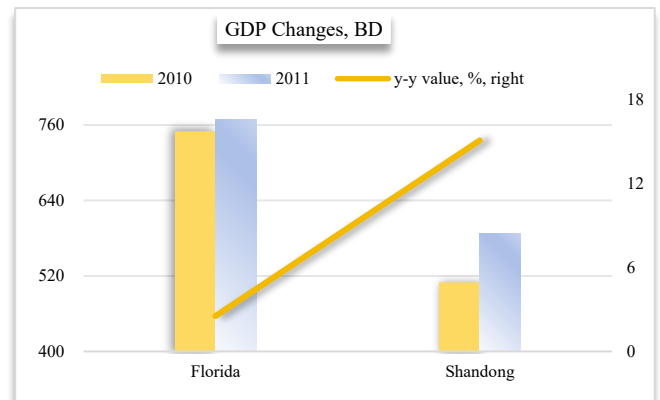

Figure 5 The Florida & Shandong province GDP analysis. [2]

Meantime, the Jiangsu & London province GDP changes analysis might show 737 & 523 billion yuan correspondingly in 2011 according to Figure 6 exhibited the Jiangsu one higher economy momentum than Guangdong province with around 1.4 times between them then. The y-y value might attain 16.7% & 6% by them accordingly to express the Jiangsu province forwards developed pace than the New York city.

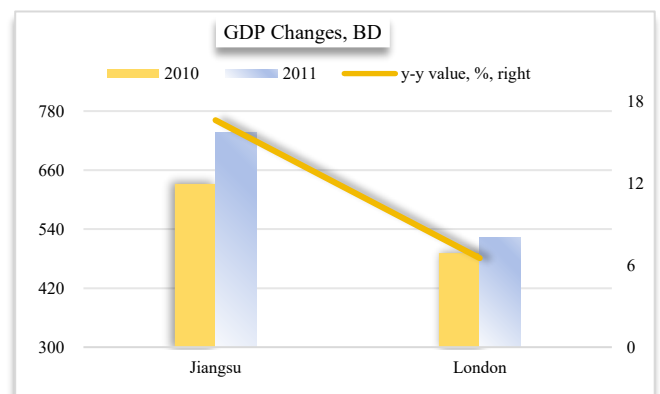

Figure 6 The Jiangsu & London province GDP analysis. [2]

In summary, the reasonable population who had a good education in school and university will create the high-technique upward dynamic in later company life for creating research and development capacity continually. We should carefully cultivate their education with experiment and theoretical deduction to solve some easy and middle difficult mathematical modeling and simulation defined a certain condition by some parameters that may be regulated variation ones to gain the a series of achievement with regards to the each aspect matter. We also should educate

the graduate to write the thesis papers with bachelor, master & PhD degree that may be a best proof to process the simulation and subsidiary experiment if possible. Then he may widen the views that may bring out the new vision to write the innovation papers sustainably. From the infrastructure to the high-tech field the new simulation will become an eternal original source, thereby, we must pay more attention to its education route special in graduate thesis, maybe after some years the achievement derived from it will be created with initial innovation eyes.

### 3. Conclusions

As we knew the GDP (gross domestic product) can wield its usefulness on evaluating economy status in one region within one period that may explain the goodness & badness there for us to know the accurate value variation in detail. So for the sake of knowing its meaning we should consider all the aspects to exhibit the intrinsic relationships make us to know the detail joints affect our value and following life convenient conditions like the incoming, expenditure & reserved money in the views of the capital route. Therefore, the high GDP value means the high expenditure like purchasing daily & consumptive goods, experiencing health appliance & drug, buying cars etc. all kinds of expending occasions. Hence, the high society request needs more money with regards to increasing that value that may enhance our level and quality than those lower ones in advance. The more high-tech like AI (artificial intelligence) product includes smart robot, smart flow-line assembly & payment machine with multi-diversities like the third payment. So that the more sophisticated diversities will become more prevalent than ever that requests our engineer and experts to process more possible routes for our more convenience and comfort behavior and paying capital timely and accurately than past. Moreover the higher demand will make our enterprise to proceed more advancement occasions sustainably that may bring out innovation technique and products in future eventually. Through detailing investigation our experts should master the market tendency and corresponding new measures in order to increase our innovative products capacity and push into the relevant market always and continuously. With using those trial occasions all of us can experience its new function and agree to that one advantages under tolerating cheapness cost like more launch producing. Meanwhile, the basis research & development in units will be advocated by the government institution to rouse the advancement function & multi-functions for the sake of continuously push those smart machine to the public. Hence the high-technique may promote the tertiary industry thriving that also can increase the part GDP raising un-doubtly. At the end the educated talents like university graduates will be recruited to work in different divisions for the sake of

communicating each other experiences to reach a good circulation which can help company to finish the useful advice and adopt new innovation ones sustainably and continually.

### Ethic Declarations

The authors declared that there were not conflicts of interest.

### Funding

This paper was supported by the Korean Science & Engineering Fund (KSEF) at the granted No. 96-0300-11-01-03, under the Specific Basis Research Program.
