Article History	Abstract
Original Research Article	<p><i>As an important behavior with portfolio & stocks dealing investment method the low risky investment may be processed by construction and individuals which may bring up beneficial amount if the correct behavior consulted with counselor in a secure security company. That may be guided the quantity investment ie choosing stocks machine designed by the financial and mathematical scientist & experts who are proficient with those market stocks price vibration through erecting a artificial intelligence modeling that may judge the current price tendency with joint position from low to high one. Therefore, the machine might tell us the choosing one stock and buying & selling time with raising limited board eventually from so many stocks in exchange market with several seconds. Therefore, the software app may help us to finish the choice time and sale one as well if the investor spend a certain money to counselor in finance firms. So we may follow the teacher instructions to buy one stock and wait for the automatic tool telling us the selling time simply. Moreover the reducing risk and gaining benefit the portfolio combination with several stocks and funds & national debts may give us more stable incoming from the investment behavior. On the other side, the financial innovation will bring up new quality productivity with following the high-Technique skill and product too, which may provide the more money from them to earn for the sake of increasing GDP(gross domestic product) ultimately. We should seek the proper investment chance and learn some technique knowledge so as to help us with finding more money from the outside. So that the highly risky investment may not maintain us to become high-profit certainly, the middle and low capital investment with more security behavior will become lots of men and initial members transacting one. Thereby those expertise invested judgement can make us to learn more investing skill and pay money to win the external counsellor together. We should sustainably look for creating innovation reformation from current situation with high-GDP level and make a preparation in advance to meet the investing opportunity. Furthermore, the ETF(exchange traded fund) will build a piles of stocks & fund dealing behavior in order to decline the general risk and make more money. Meanwhile, the high-technique investment will carry out our long-terms benefit with growing the invested company if we find the new and potential stock. Only continuous investment behavior may make us to earn the more money from the buying those companies stocks in a certain amount, which will take up more than 28 times benefit within 8 years.</i></p> <p>Keywords: an Innovation searching, US & Asian nations GDP Variations, Japan & Chinese cities GDP changes, by Sustainability.</p>

1. Introduction

The high-technique product and skill will become more significant than ever because AI (artificial intelligence) technique replaces the automatic and man-work flow-lines in a maker largely according to News report. So that those high-tech skill will transform into the product making ability may occupy a more important task for our scientist and engineers to deal with. Therein, the many AI Robots have to enter the maker workshop to efficient work for men will be prevalent and low cost. At the same time, the AI Robot making makers will stand in the mount peak to proceed all kinds of experiment trials and expand those function software and hardware that may be instructed collaboratively by the university PhD who grasped some important message. Through contacting those cooperation experiment with parameters like temperature, time and deviation scope grasping conditions might be exhibited between them which may play an important effectiveness on how to produce the new product more precisely and having low-cost features. Another one will erect the product equipment like processing machine, automatic flow-equipment which may be depending on the out-source-enterprise with the demand condition. Then the scientists will give his opinions to the deviation endurance which makes the possible making capacity upwards and looks forwards to enduring more time without main error.

The tertiary industry would involve on service business like high-technique-service office for enterprises influence in one region whose making purchase order and complaint so as to request more orders from the maker in neighbor maker and sale centers. They will transfer message from the ultimate customer to factory for improving their some function continuously as a consultation company. On the other hand, the whole GDP increasement might influence the tertiary one reversely due to enough income could raise our consumption capacity, special in service business. However the which business we could proceed the GDP factors will be enhanced from their physical & brain labors. Thereby, whatever you pursued the certain dedication to our society progression at all.

At the end the tertiary one role is made strong more and more when seeing the GDP value, therefore more and more stores and offices will be allocated in city for the sake of acquiring more information about their products. Meantime, the special sale stores will be much than ever like Huawei handphone and i-pad even portable computer which is a high-light in a department lobby. Their aim at increasing sale amount is one aspect firstly, then sell EV etc. new concept electric auto is two one. As we knew the price difference between them might attain more than 50 times. So that the perspective will be watched special in the tertiary industry which may create more profitable mediate-

life consumption less than ten years. Maybe after decade the humanoid robots would enter our life like family, coffee store & canteen in light of present tendency and development, so we might share the automatic time in advance. [1~26]

2. Discussions

Through improving GDP value with all aspects of proceeding much endeavour and conquest by our scientist and professors the our convenient live will be acquired with those contribution to our society enlarged level. Hence, we are to continuously process our resolution to utilizing new-quality-productivity with new technique special in interdisciplinary field contribution for the sake of eventually eliminating contamination source from the carbon atmosphere in earth. Therefore, the less cultivation from minerals for maintaining low-carbon atmosphere protecting the cherish natural resource for another usefulness will be urgent task met in front of our progression paces. Therefore, the improving our live condition might be formed and the only thing for us to process will become specialized for many new subjects to study in schools in advance. Hence the advancement subjects can be created by our constant endeavour with different subjects combined by inter-disciplinary ones which may become an important measure to be learned and developed by us from now on. [27~28]

2.1 US & Asian nations GDP changes

The USA states & Asian nations GDP variation would exhibit 88 & 29.7 billion dollars by New York~New Jersey accordingly in 1966 according to Figure 1 to record the New York & California forwards economic momentum with 86 billion dollars GDP value then. Moreover, the China maintained the third one with 75 billion dollars which exceeded 50 billion dollars. On the contrary, the Texas remained the seventh one with 38 billion dollars in 1966 exceeding New Jersey which occupied the eighth one.

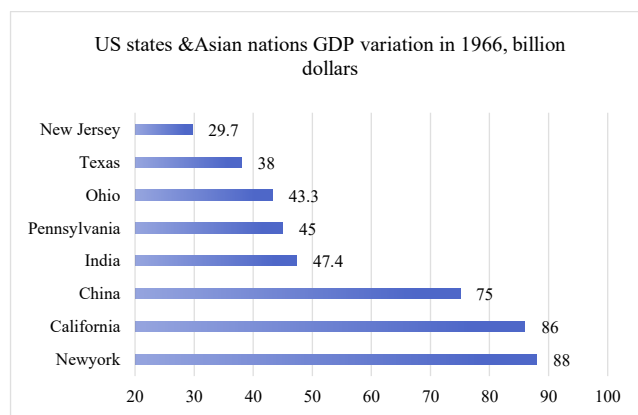

Figure 1 US & Asian nations GDP changes. [1]

Moreover, the Asian counties GDP variation would exhibit 216 & 125 billion dollars by Texas~Ohio states accordingly

in 1980 according to Figure 2 to record the Texas forwards economic momentum with around 1.72 times among them. The y-y value might exhibit 25% & 11% by them respectively indicated the former Texas & India more upwards developing pace with 15% pace.

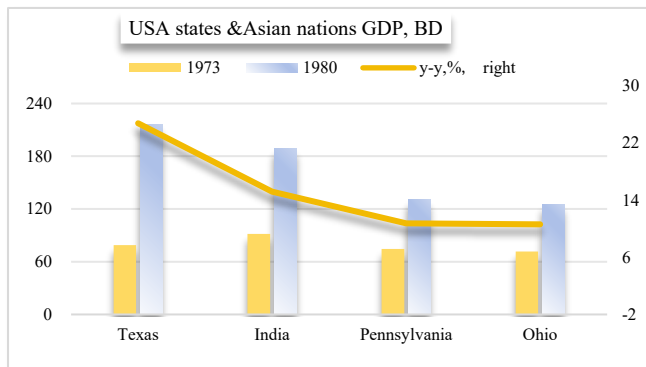

Figure 2 Asian counties GDP variation VII. [1]

2.2 Japan & Chinese cities GDP changes

The Japan & Chinese middle cities GDP variations might exhibit 4,430 & 875 billion dollars by Japan & Hubei province correspondingly in 2025 according to Figure 3 recorded the Japan forwards economic momentum entity. The y-y value might show 4.3% & 3% by them respectively to indicate their moderate developed pace.

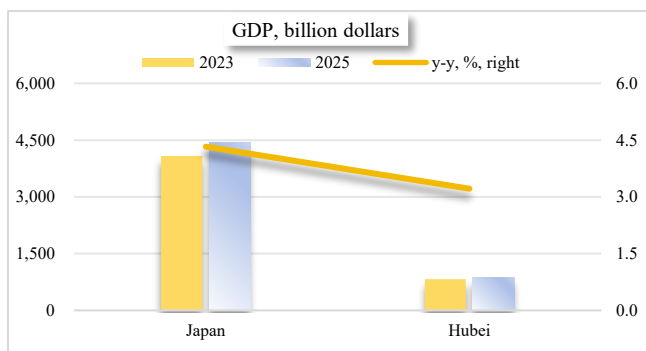

Figure 3 Japan & Chinese middle cities GDP changes. [2]

Furthermore, the Japan & Chinese middle cities GDP variations might exhibit 4,430 & 875 billion dollars by Henan & Anhui province correspondingly according to Figure 4 in 2025 recorded the Henan forwards economic momentum entity. The y-y value might show around 3% by them respectively to indicate their moderate developed pace.

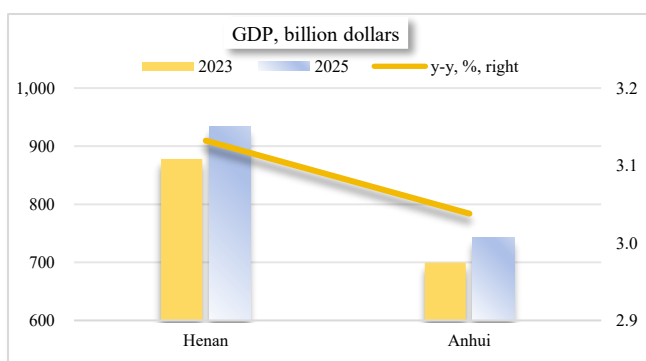

Figure 4 Chinese middle cities GDP changes I. [2]

Moreover, the Japan & Chinese middle cities GDP variations might exhibit 774 & 504 billion dollars by Hunan & Jiangxi province correspondingly according to Figure 5 in 2025 recorded the Hunan forwards economic momentum entity. The y-y value might show around 3% by them respectively to indicate their moderate developed pace.

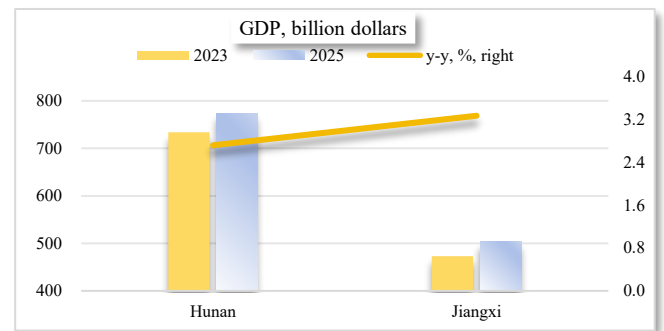

Figure 5 Chinese middle cities GDP changes II. [2]

Moreover, the Japan & Chinese middle cities GDP variations might exhibit 3.4 & 2.6 billion dollars by Hunan & Anhui province correspondingly according to Figure 6 in 1981 recorded the Henan forwards economic momentum entity with 3.7 billion dollars value. The y-y value might show around 18%~14% by them respectively to indicate the Henan upwards developed pace with 18.2% pace value.

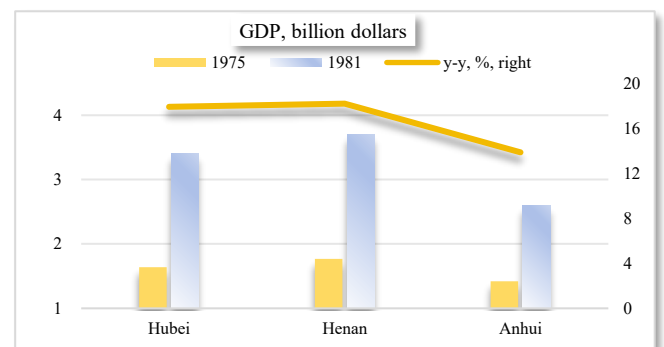

Figure 6 Chinese middle cities GDP changes III. [2]

Moreover, the Japan & Chinese middle cities GDP variations might exhibit 3.2 & 1.8 billion dollars by Hunan & Jiangxi province correspondingly according to Figure 7 in 1981 recorded the Hunan forwards economic momentum entity. The y-y value might show around 16% & 18% by them respectively to indicate their forwards developed pace.

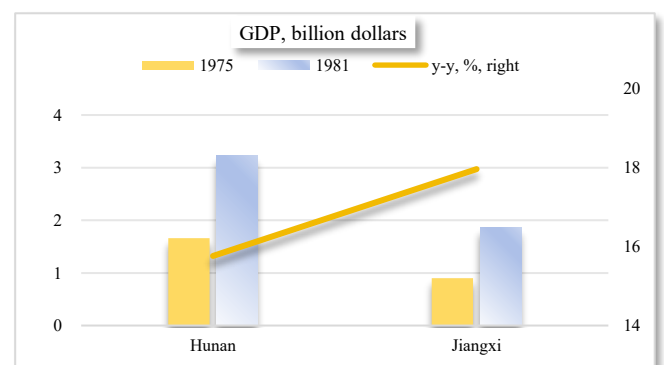

Figure 7 Chinese middle cities GDP changes IV. [2]

Summarily, the citizen consumption behavior will be important one aspect, hence we should earn much money from investing capital on the financial dealing direction for the sake of getting more investment opportunity with our reserved money, like entering stock market and estate investment etc many aspects. With regards to increasing GDP value the more chance for us to deal with will become multi-type and diversifying-types time, therefore we need to catch the chance to become treasurer dream more clearly. Hence we can process the investment behavior from now on with learning more knowledge to invest theory from video application software and practical-books in details. Thereby, the more capital flow will affect the GDP enhancement continually for our life to become more positively and enjoyments than ever any-time. Our learning knowledge will become treasure in financial investment after we prudently consider the risk burden capacity that will become the dynamic for our investor to proceed sustainably.

3. Conclusions

As an important behavior with portfolio & stocks dealing investment method the low risky investment may be processed by construction and individuals which may bring up beneficial amount if the correct behavior consulted with counselor in a secure security company. That may be guided the quantity investment ie choosing stocks machine designed by the financial and mathematical scientist & experts who are proficient with those market stocks price vibration through erecting a artificial intelligence modeling that may judge the current price tendency with joint position from low to high one. Therefore, the machine might tell us the choosing one stock and buying & selling time with raising limited board eventually from so many stocks in exchange market with several seconds. Therefore, the software app may help us to finish the choice time and sale one as well if the investor spend a certain money to counselor in finance firms. So we may follow the teacher instructions to buy one stock and wait for the automatic tool telling us the selling time simply. Moreover the reducing risk and gaining benefit the portfolio combination with several stocks and funds & national debts may give us more stable incoming from the investment behavior. On the other side, the financial innovation will bring up new quality productivity with following the high-Technique skill and product too, which may provide the more money from them to earn for the sake of increasing GDP (gross domestic product) ultimately. We should seek the proper investment chance and learn some technique knowledge so as to help us with finding more money from the outside. So that the highly risky investment may not maintain us to become high-profit certainly, the middle and low capital investment with more security behavior will become lots of men and

initial members transacting one. Thereby those expertise invested judgement can make us to learn more investing skill and pay money to win the external counsellor together. We should sustainably look for creating innovation reformation from current situation with high-GDP level and make a preparation in advance to meet the investing opportunity. Furthermore, the ETF(exchange traded fund) will build a piles of stocks & fund dealing behavior in order to decline the general risk and make more money. Meanwhile, the high-technique investment will carry out our long-terms benefit with growing the invested company if we find the new and potential stock. Only continuous investment behavior may make us to earn the more money from the buying those companies stocks in a certain amount, which will take up more than 28 times benefit within 10 years.
